

Tropical Storm Edouard

Key Messages

- Maximum sustained winds are currently 50 mph.
- Chances favor landfall near Sabine Pass.
- Isolated to scattered showers and thunderstorms will occur across southern Louisiana and southeast Texas through this evening with a risk for tornadoes.
- Rainfall amounts ranging from One half up to 4 inches are expected, with the highest amounts expected to occur over SE TX. There could be pockets of isolated amounts that are higher than 6 inches.
- 3 to 5 feet of storm surge is forecasted to occur along the southwest Louisiana and southeast Texas coast.

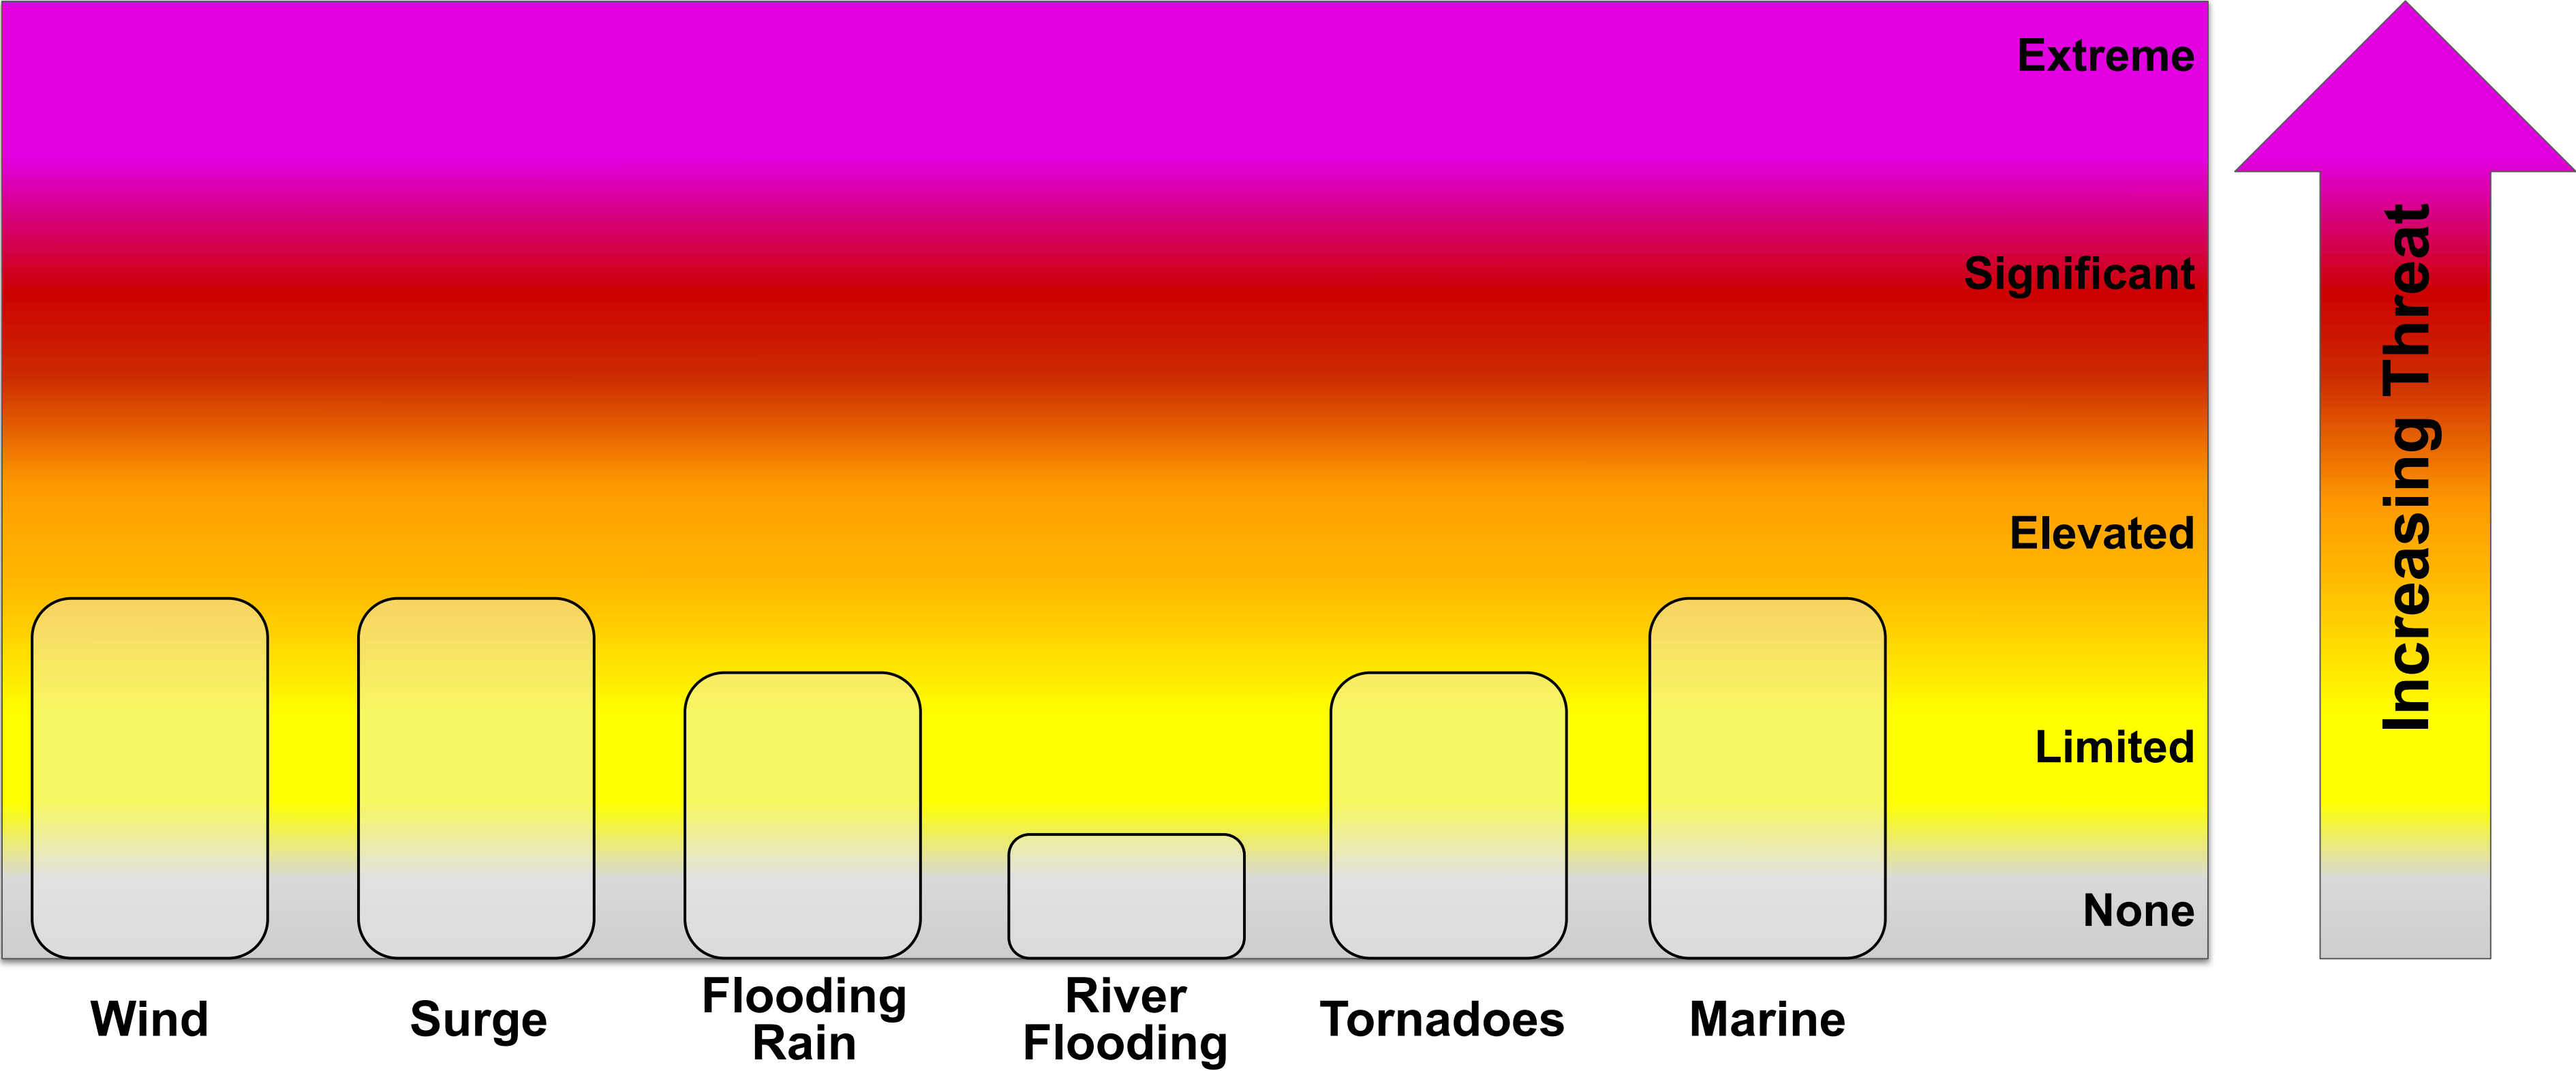

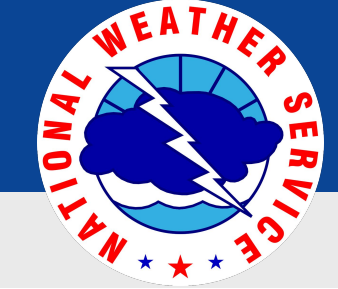

Threat Levels

September 1, 2026
10:10 AM

Tropical Storm Edouard

For information on specific hazards in this area, please go to: <https://www.weather.gov/srh/tropical?office=lch>

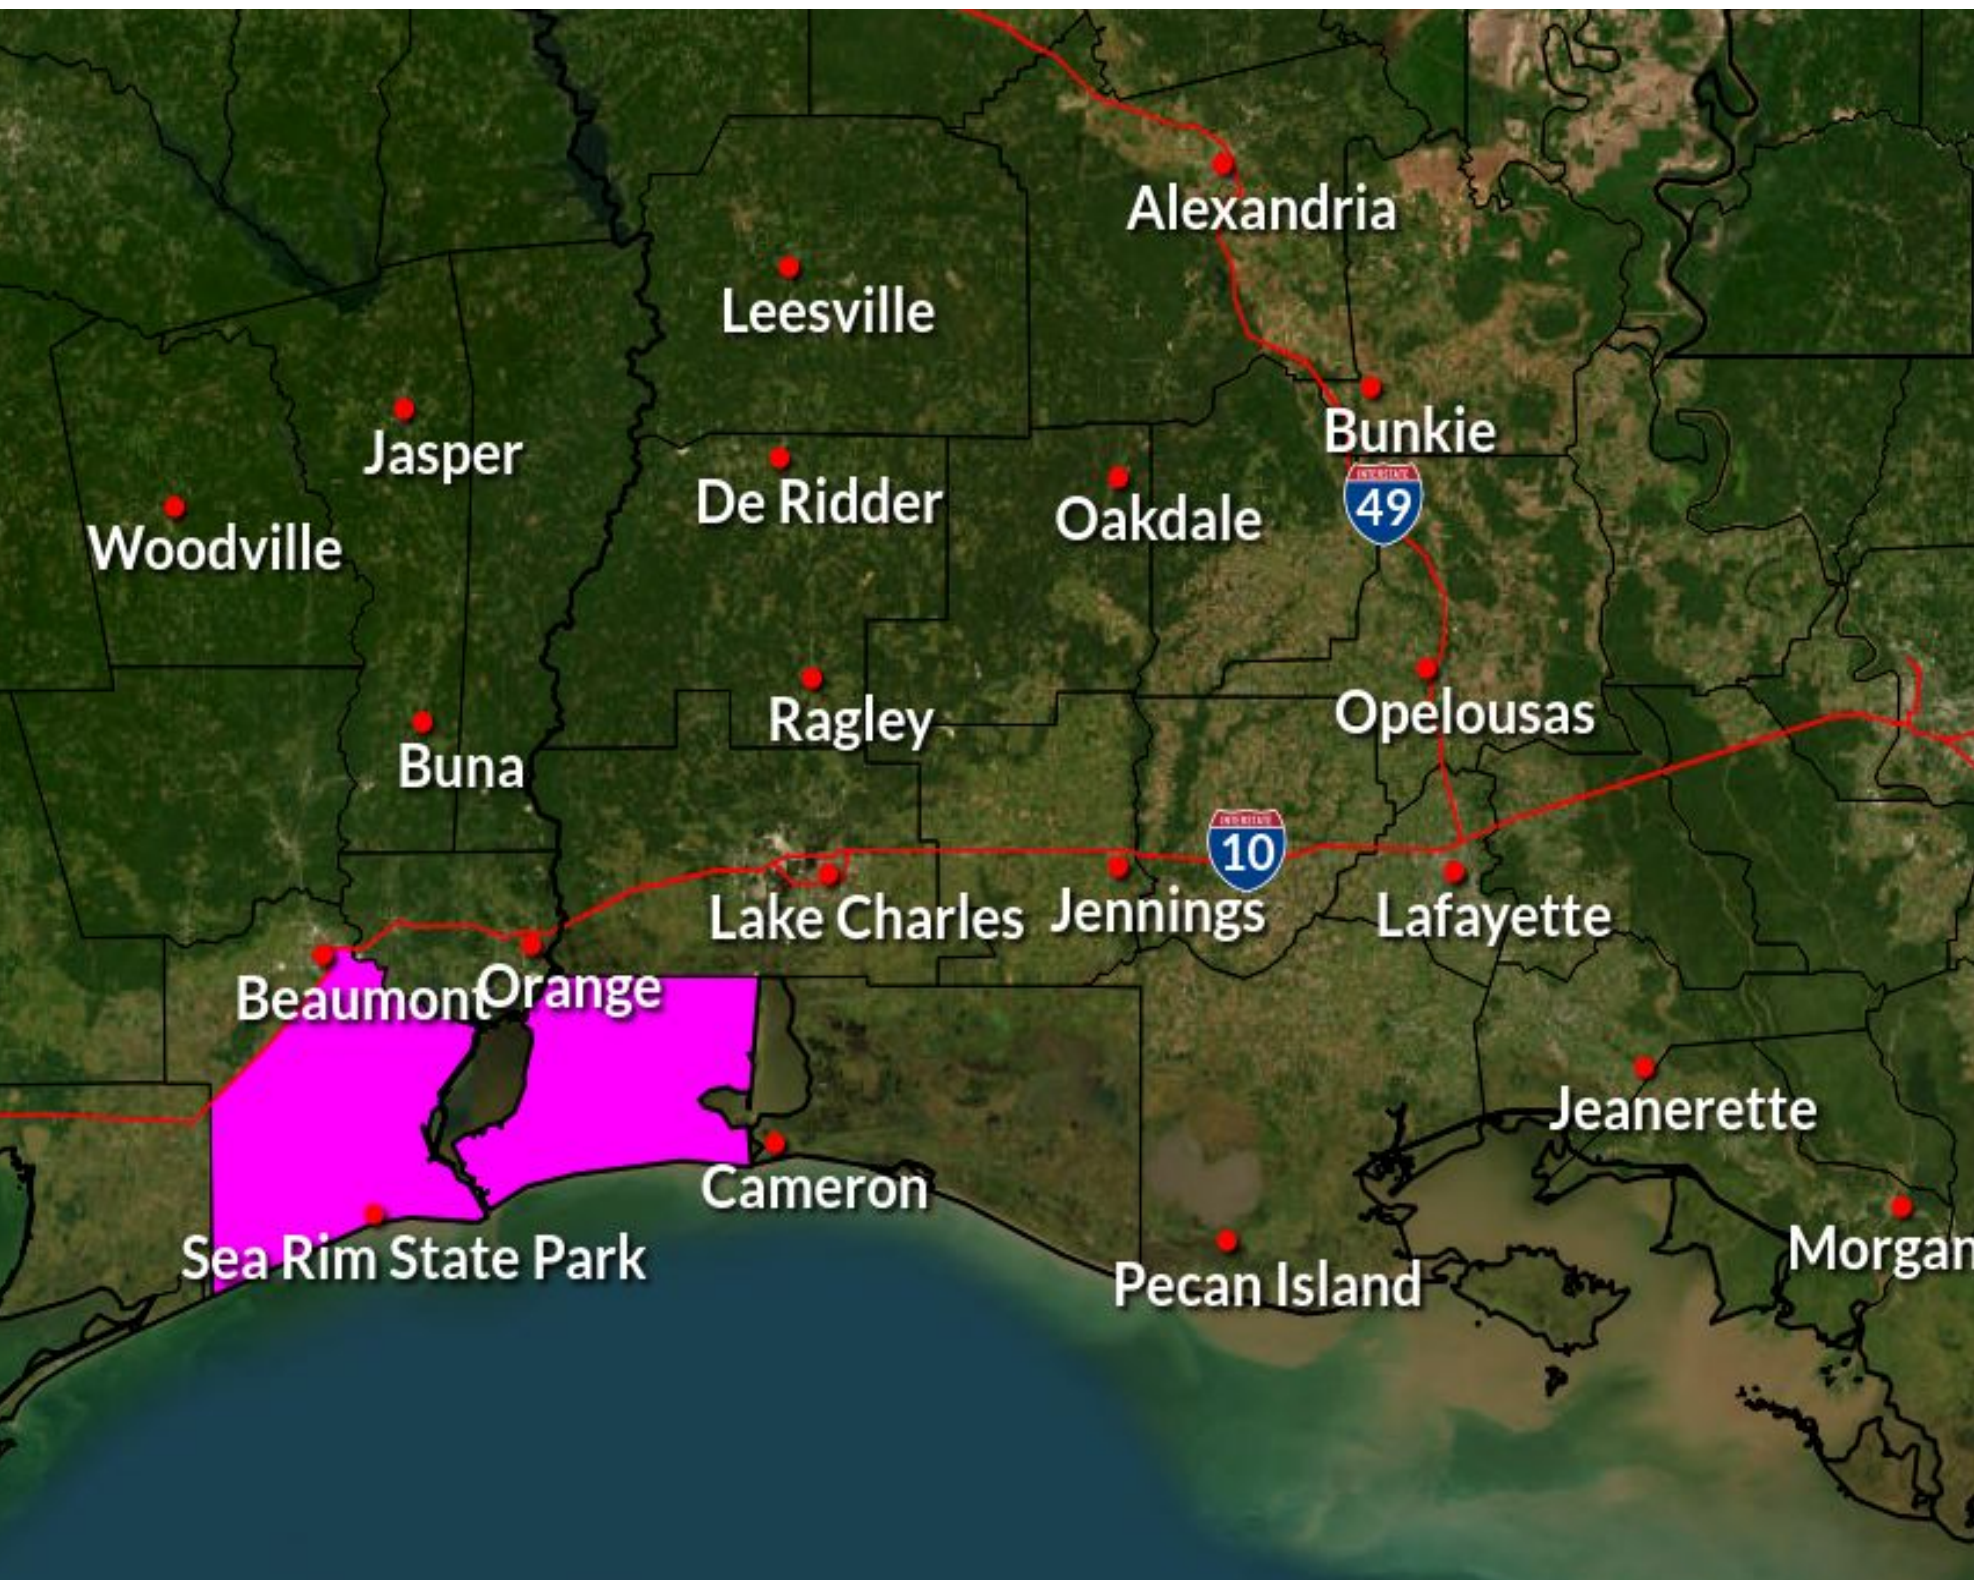

Hurricane Watch

Tropical Storm Edouard

September 1, 2026
10:10 AM

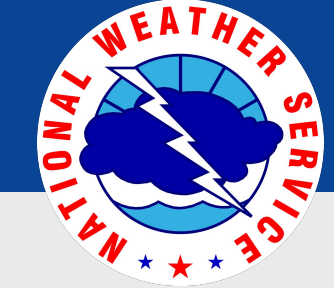

- A **Hurricane Watch** is in effect for lower Jefferson County in Texas and western Cameron Parish in Louisiana
- A Hurricane Watch means that hurricane force (74+ MPH) winds are possible in the watch area within 12-24 hours in this case

National Oceanic and
Atmospheric Administration
U.S. Department of Commerce

National Weather Service
Lake Charles, LA

Tropical Storm Warning

Tropical Storm Edouard

September 1, 2026
10:10 AM

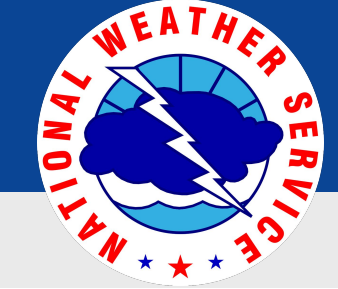

- A **Tropical Storm Warning** remains in effect for Cameron and lower Vermillion Parish in Louisiana as well as lower Jefferson County in Texas.
- A **Tropical Storm Warning** has been issued for Orange, Upper Jefferson, Harding and Southern Jasper and Newton Counties
- A **Tropical Storm Warning** remains in effect for all coastal waters from Intracoastal City westward through High Island, including Sabine and Calcasieu Lakes.

National Oceanic and
Atmospheric Administration
U.S. Department of Commerce

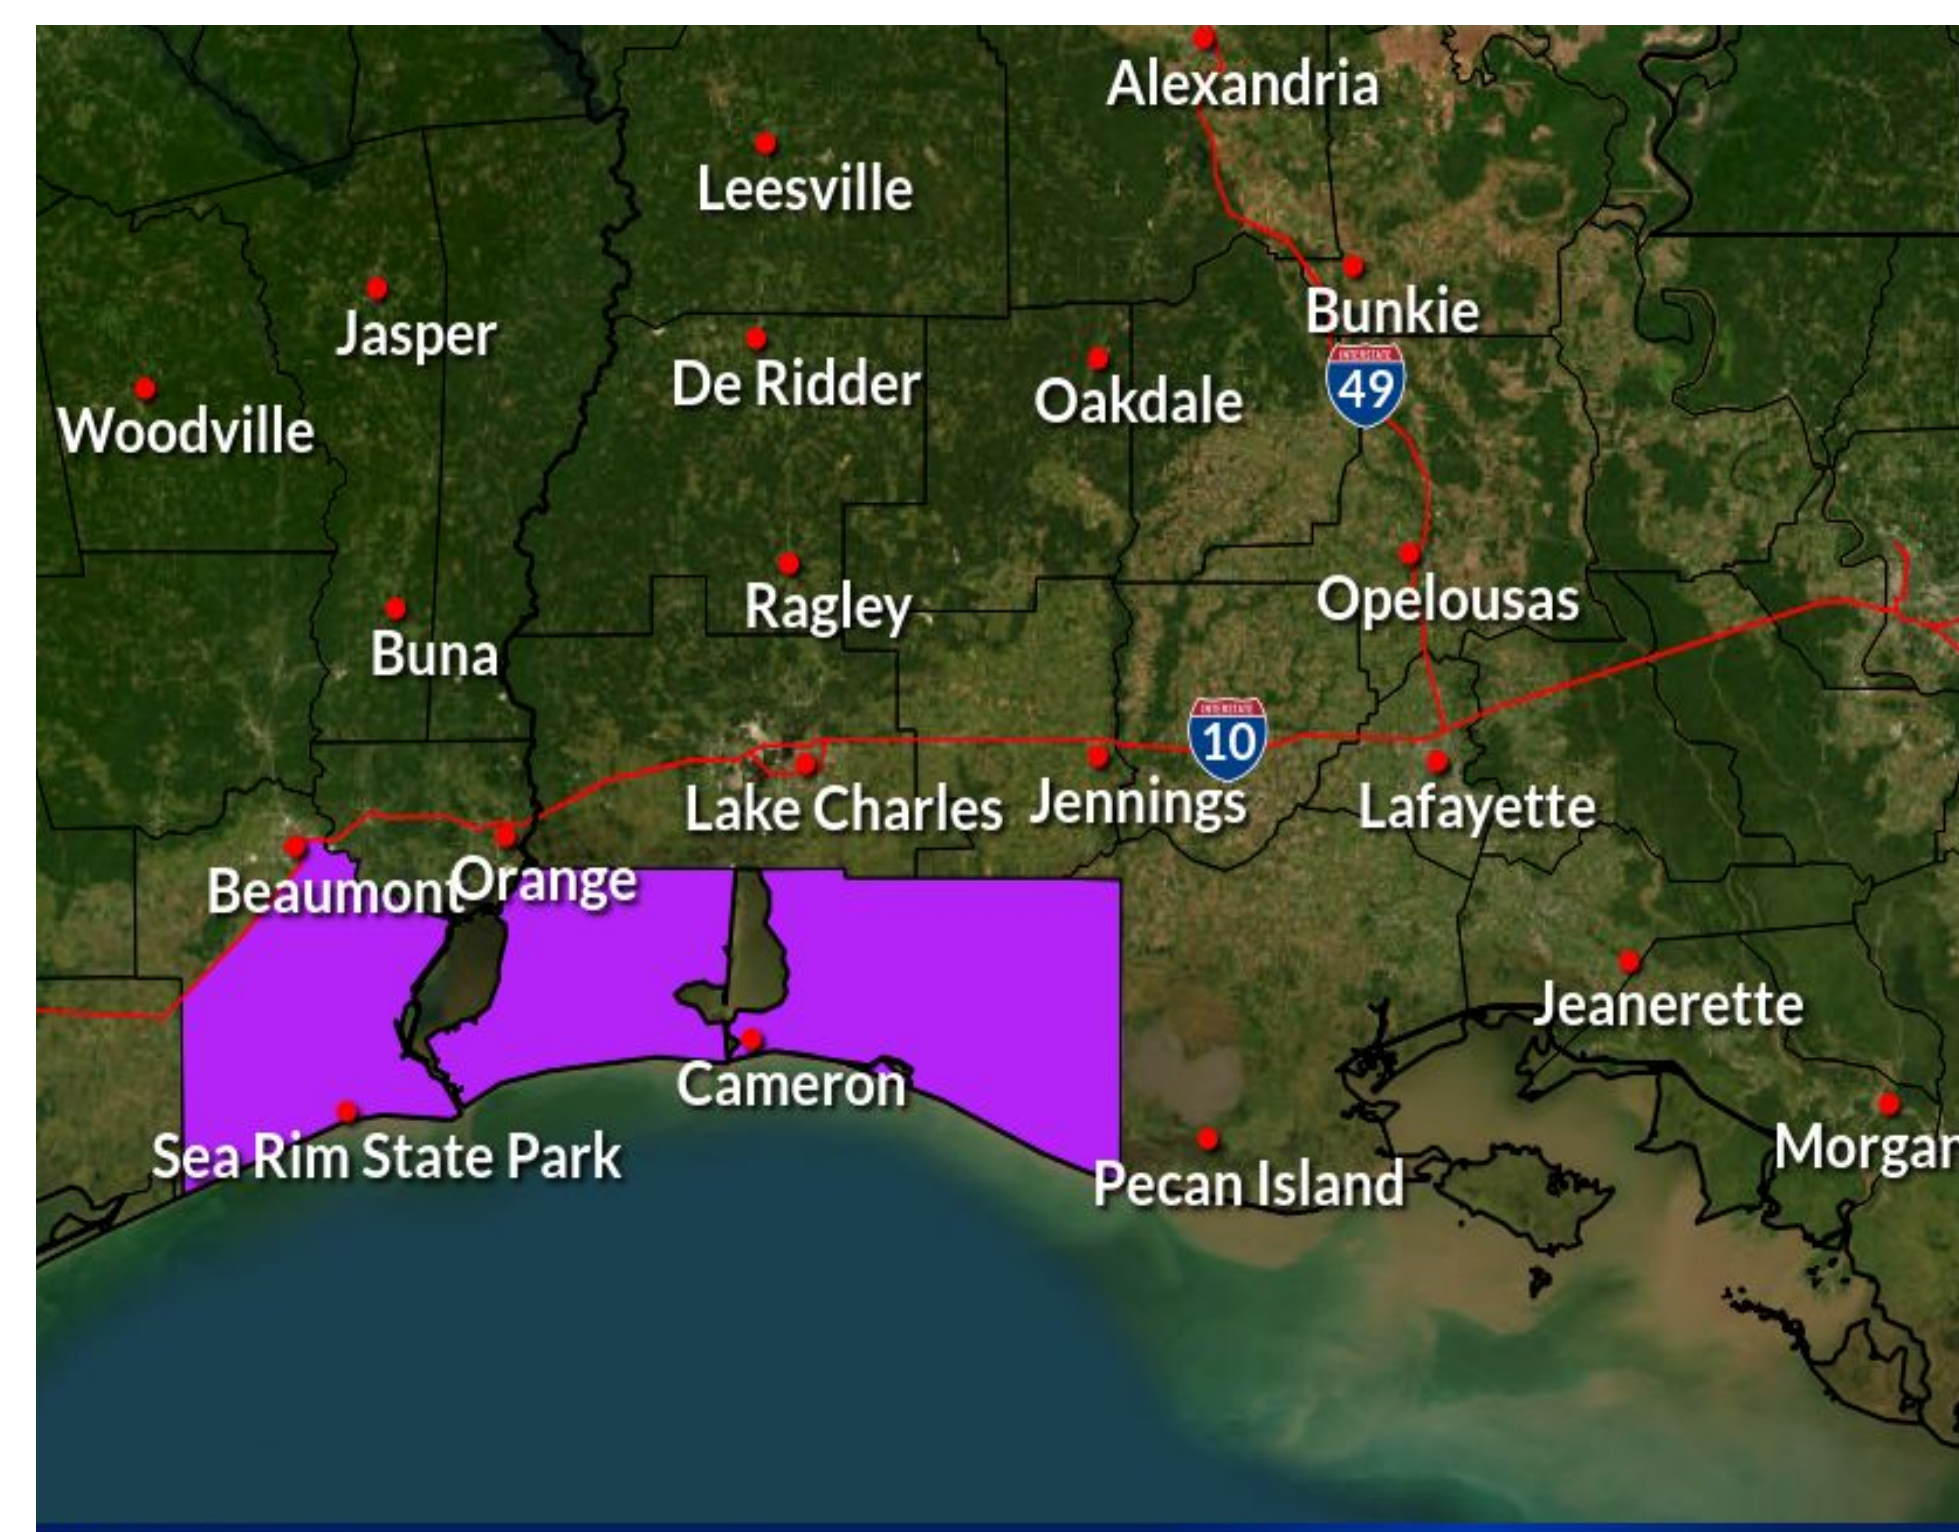

National Weather Service
Lake Charles, LA

Storm Surge Warning

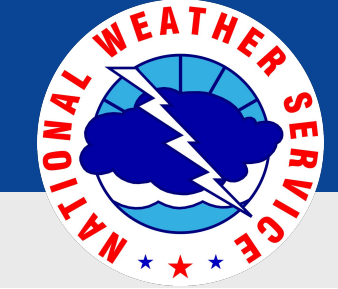

Tropical Storm Edouard

September 1, 2026
10:10 AM

- A **Storm Surge Warning** is now in effect for lower Jefferson County and western Cameron Parishes, specifically along the immediate coastline
- Storm surge up to 3-5 feet is possible across the warning area

Wind Advisory

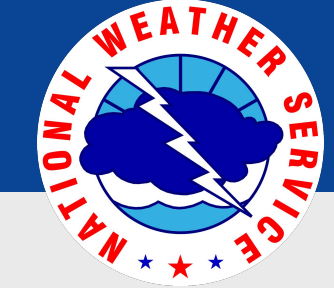

Tropical Storm Edouard

September 1, 2026
10:10 AM

- A **Wind Advisory** is now in effect for Tyler, Northern Jasper and Newton Counties in Texas. All of Calcasieu Parish in Louisiana.
- Winds of 15 to 25 with gusts to 45 MPH

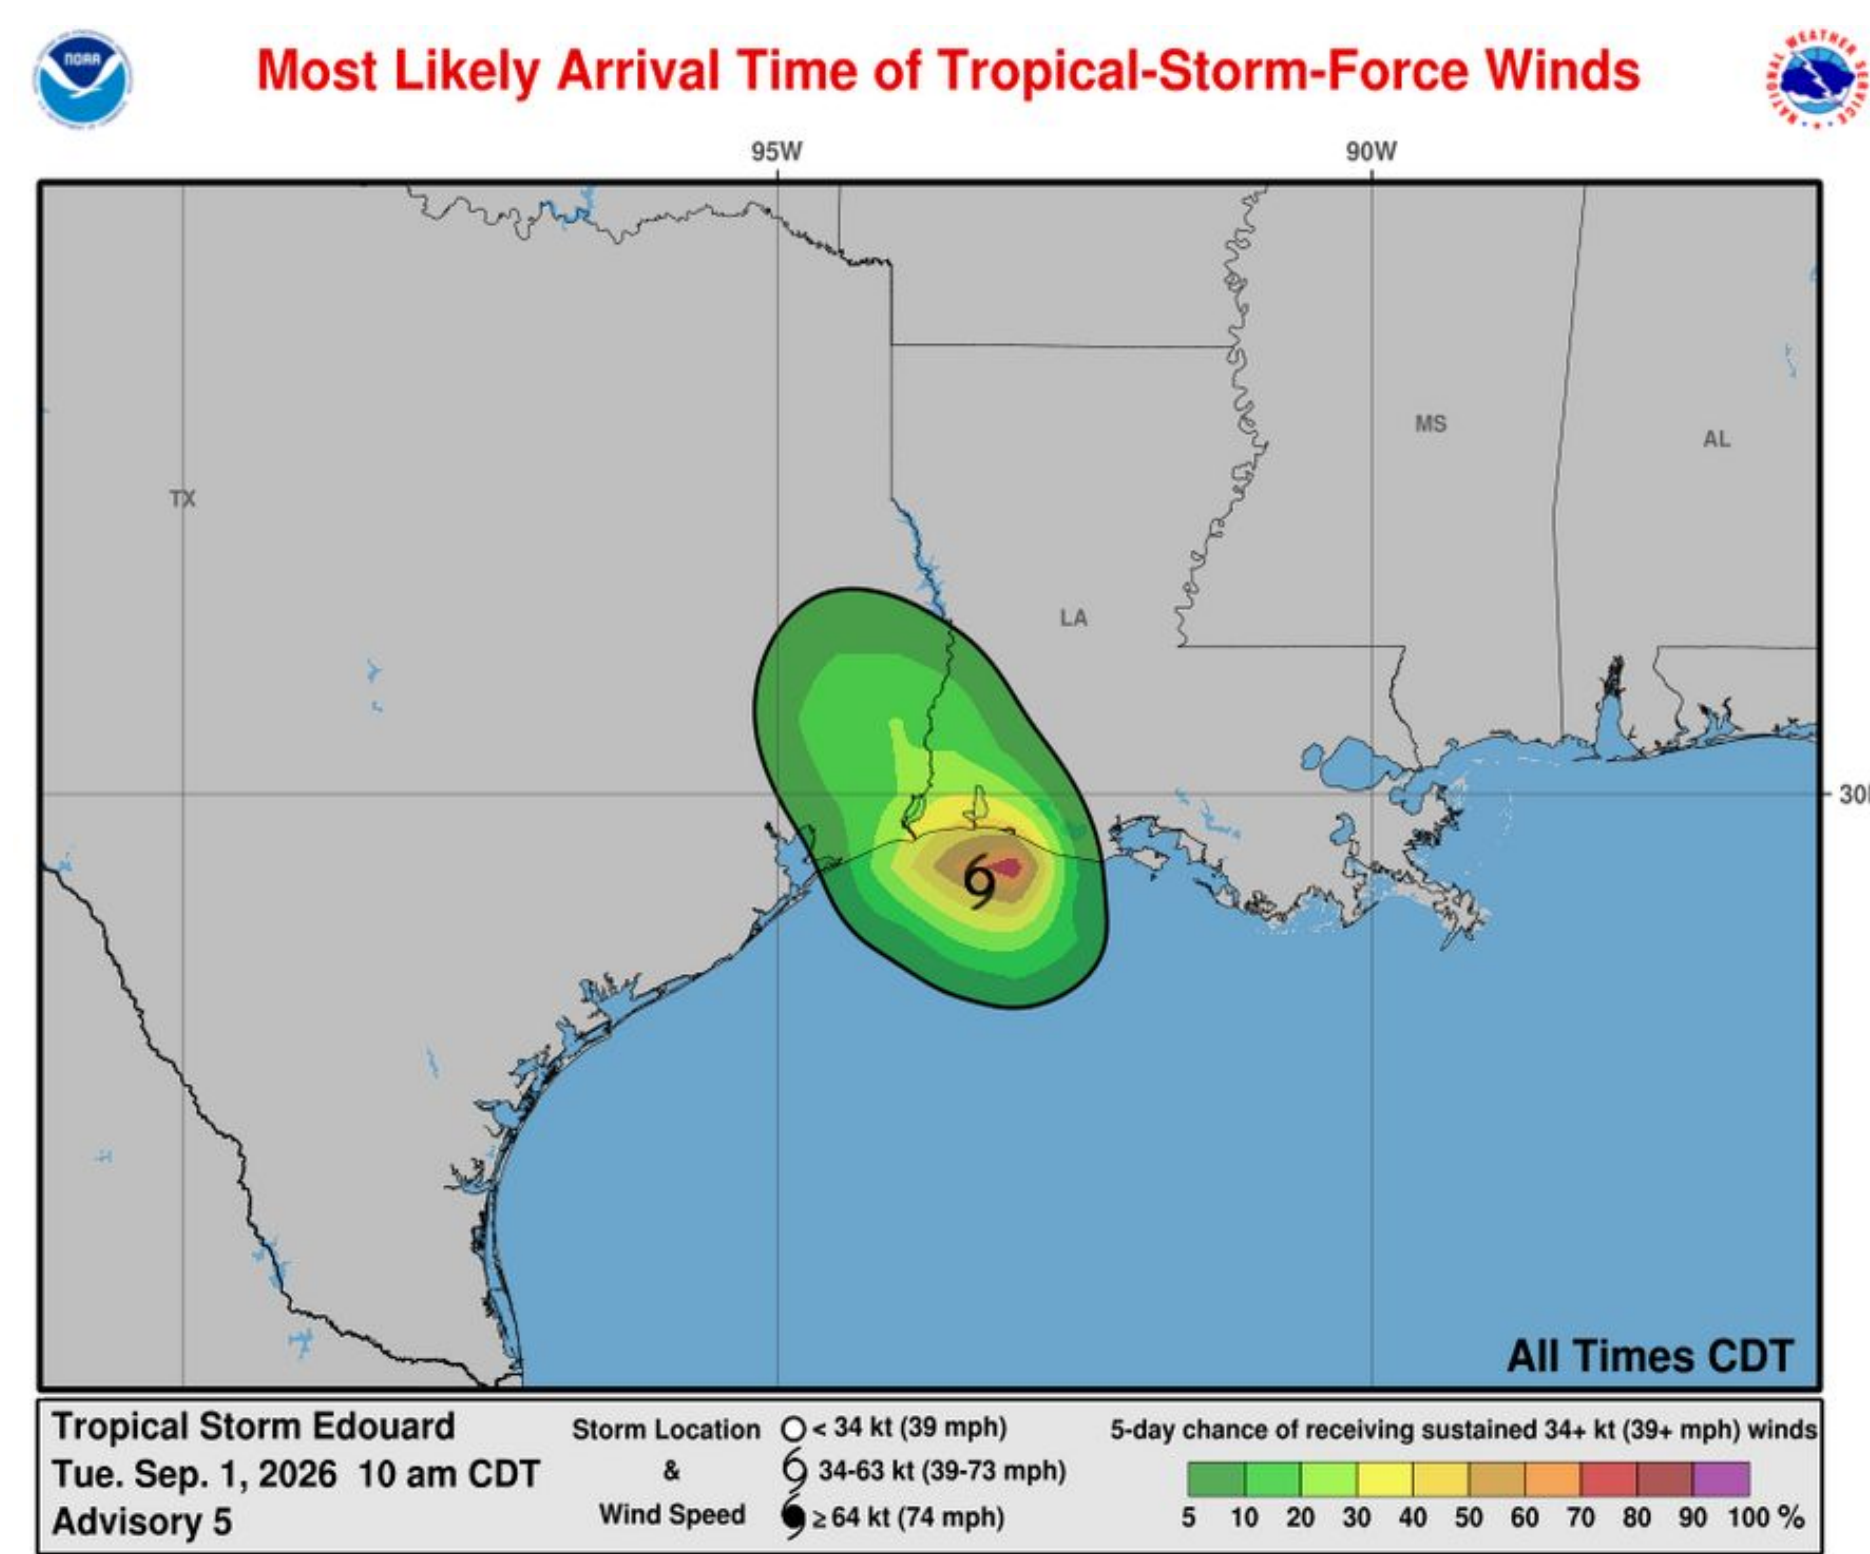

Tropical Storm Wind Speed Probabilities

September 1, 2026
10:10 AM

Tropical Storm Edouard

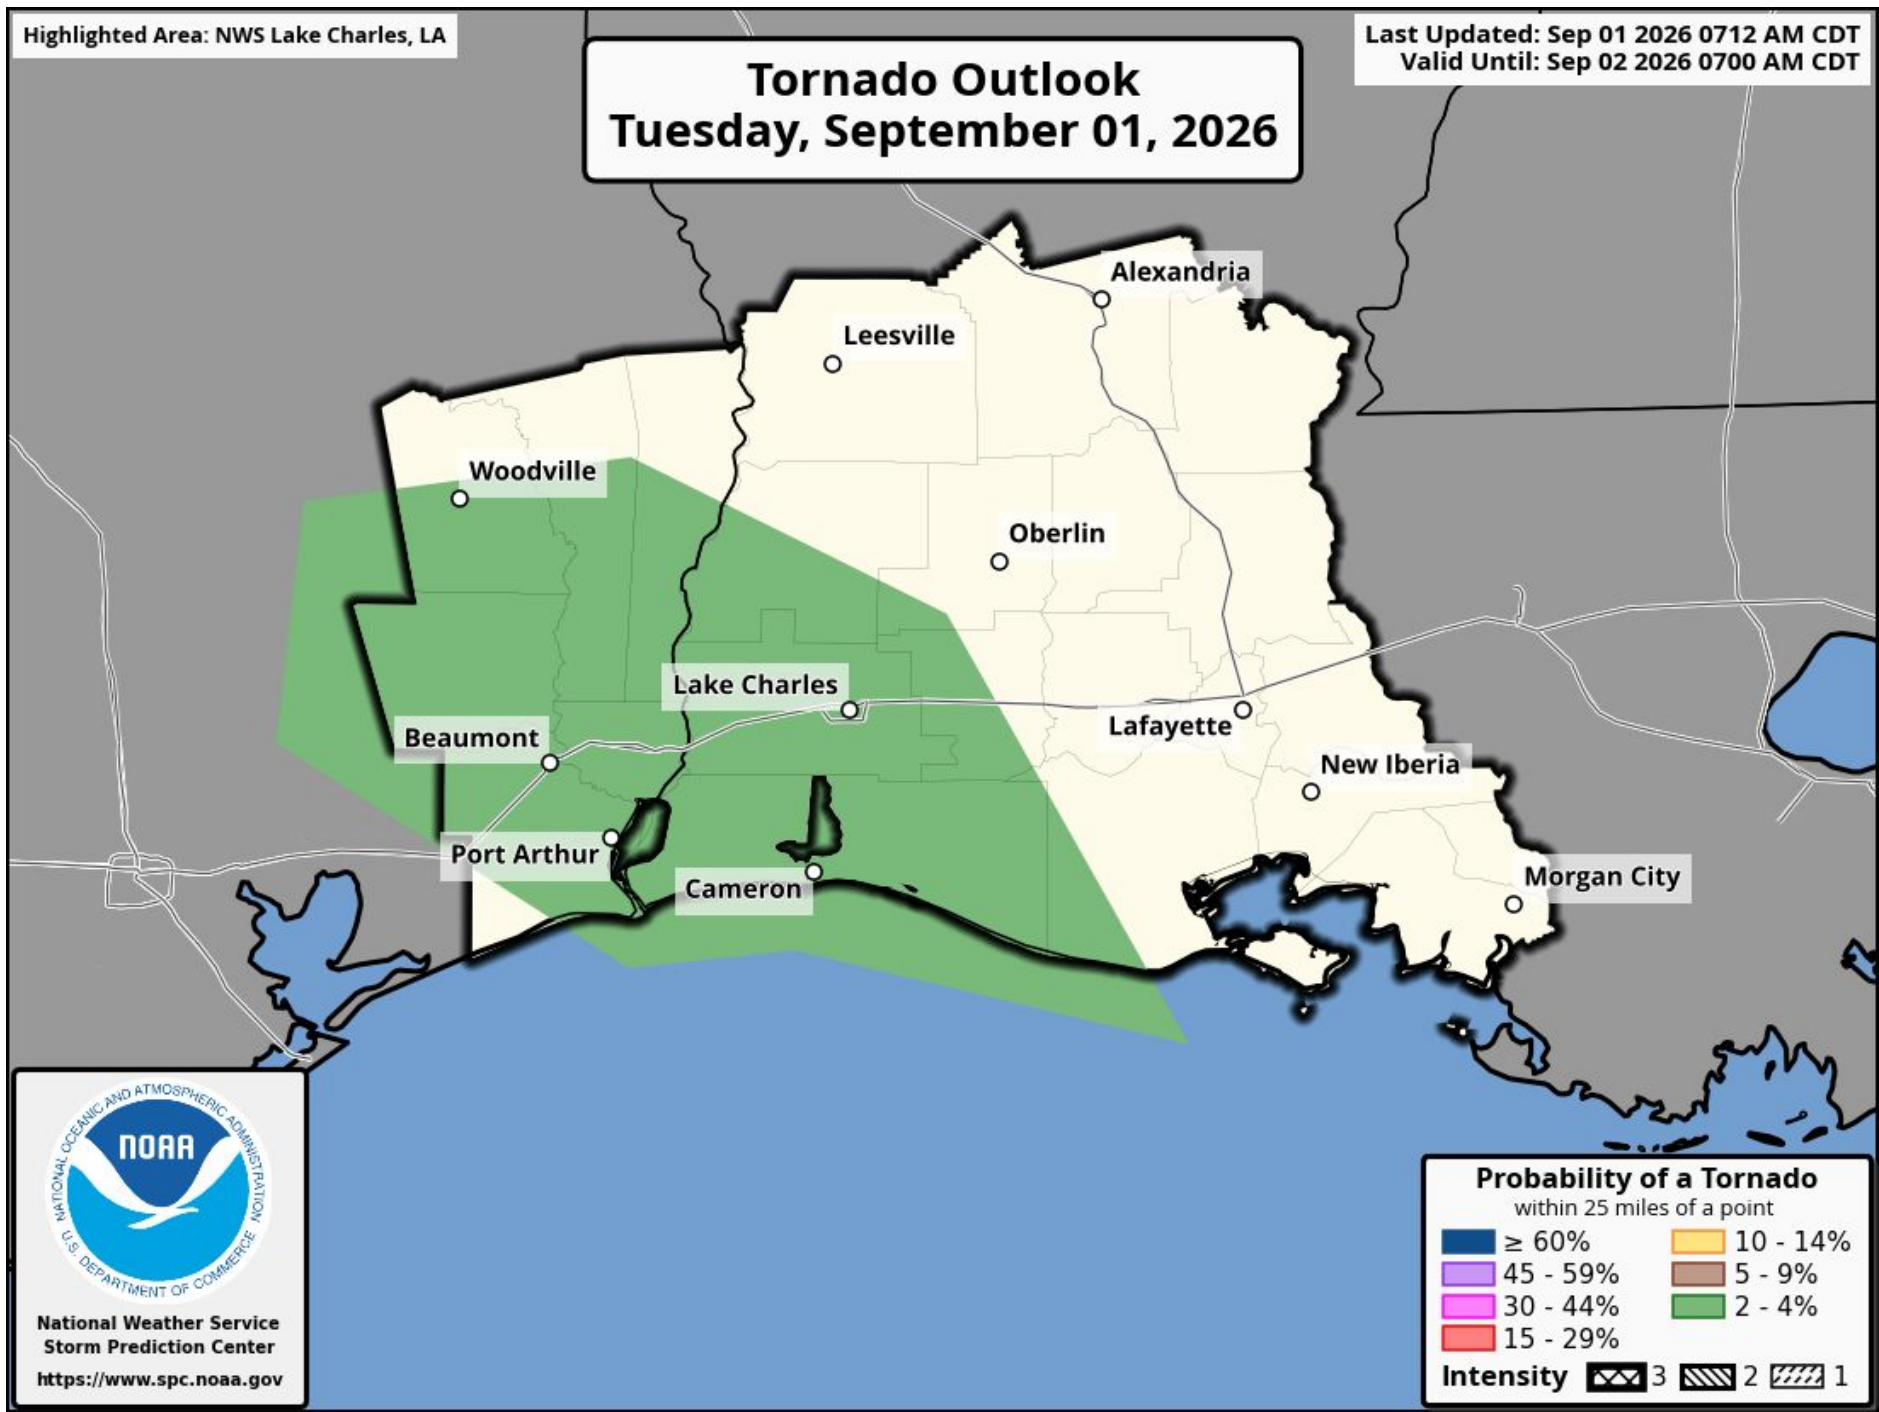

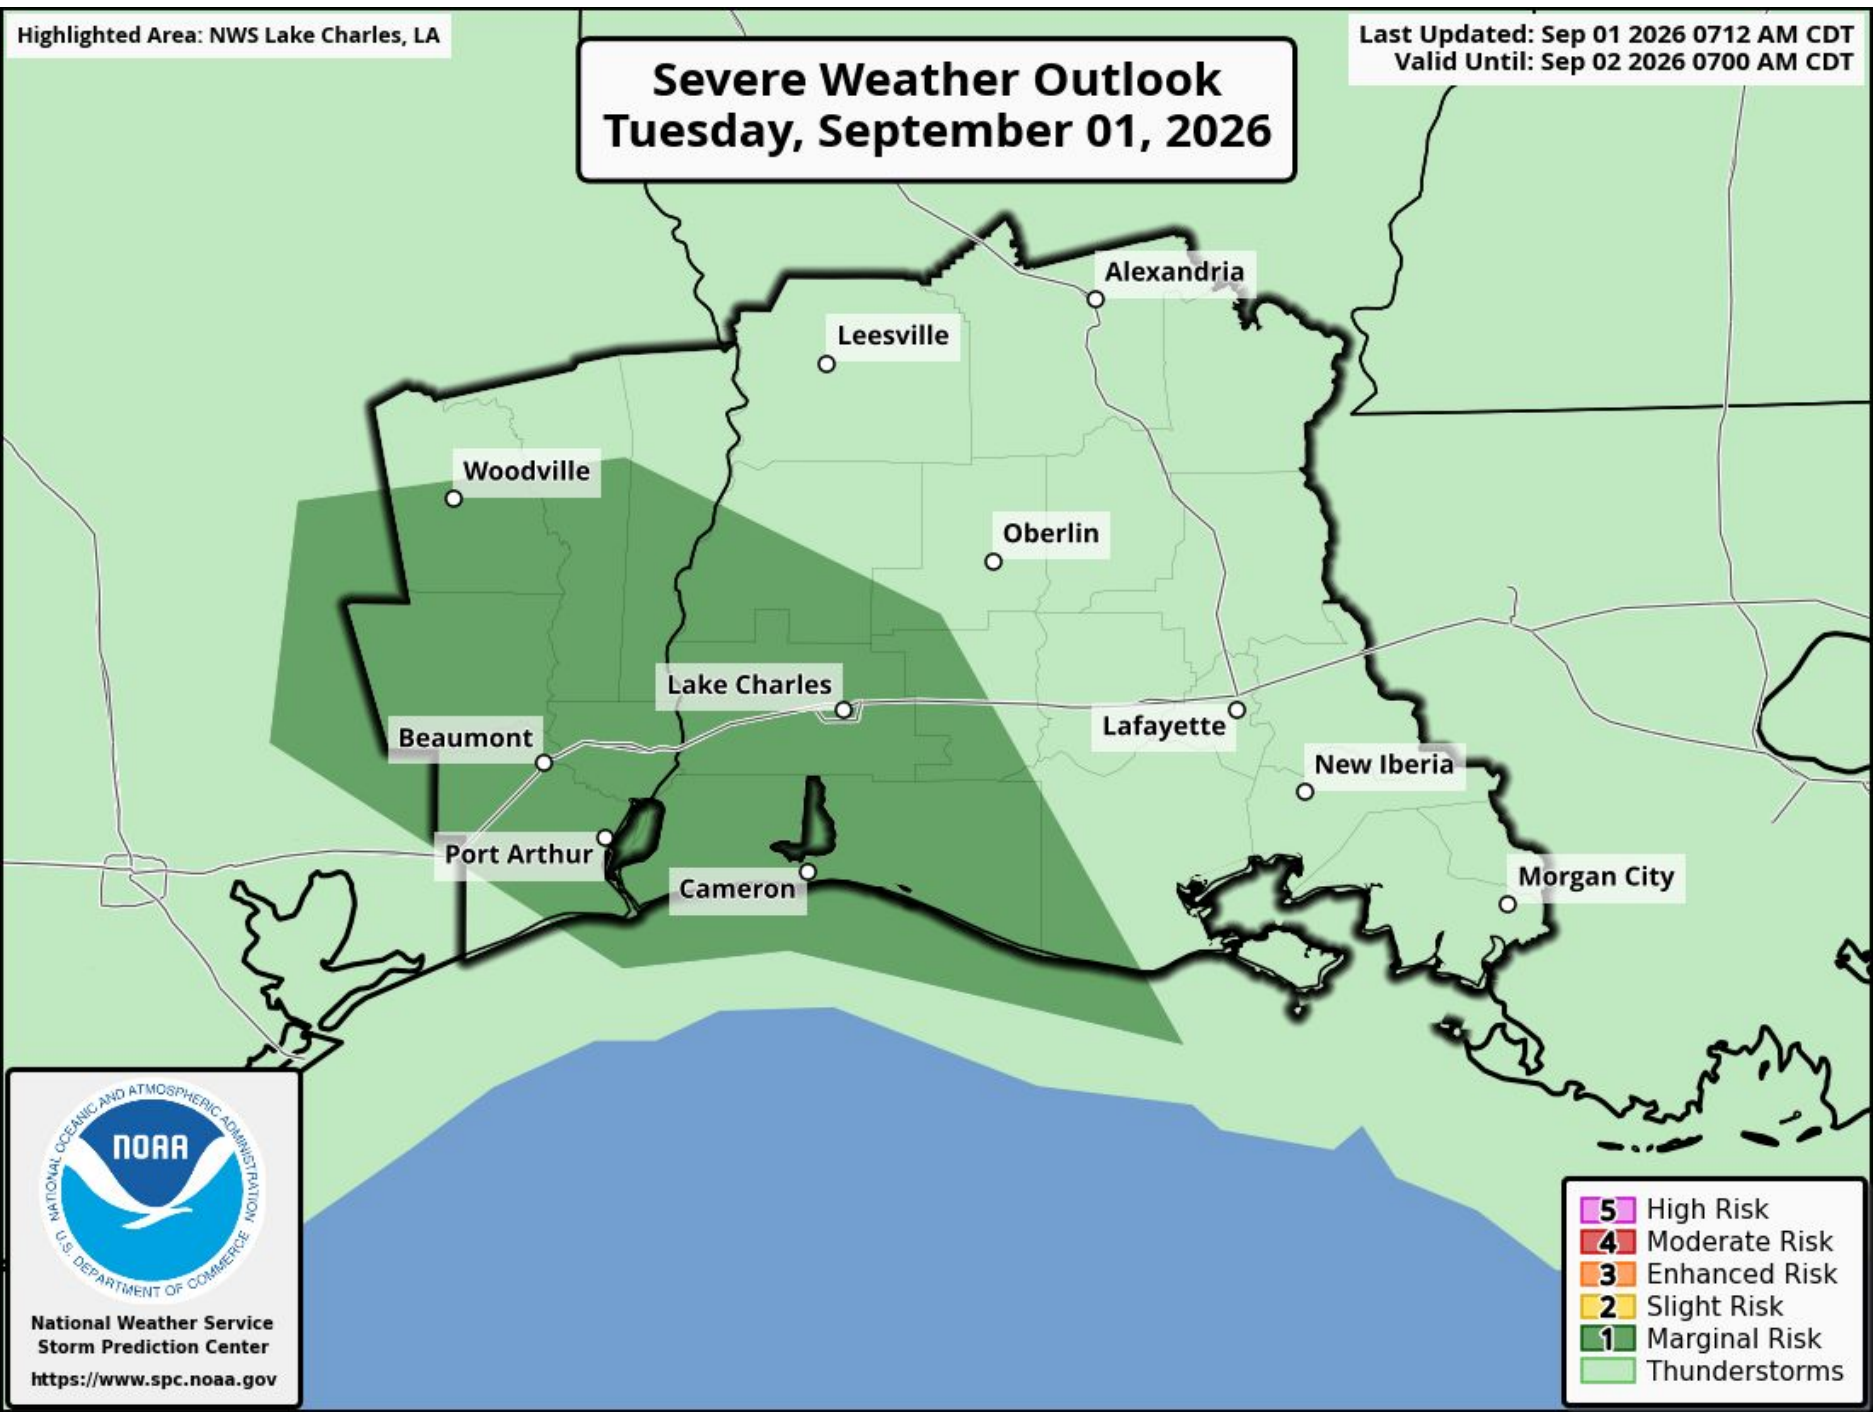

- Most likely timing of arrival for tropical storm force winds along the Louisiana and Texas coast would occur Now through this evening.
- Chances for tropical storm force winds inland/at the coast are around 10 to 60% at this time.

Tornado Risk: 2% - 4%

September 1, 2026
10:10 AM

There is a marginal risk for tornadoes over portions of southwest Louisiana and southeast Texas due to Tropical Storm Edouard.

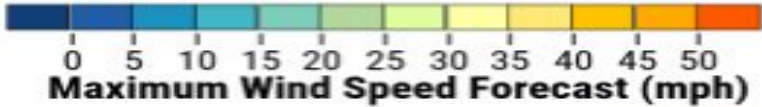

There is a two to four percent chance of tornadoes within a 25 mile radius of any location shaded in green.

Winds: Louisiana Along and NW of HWY 165

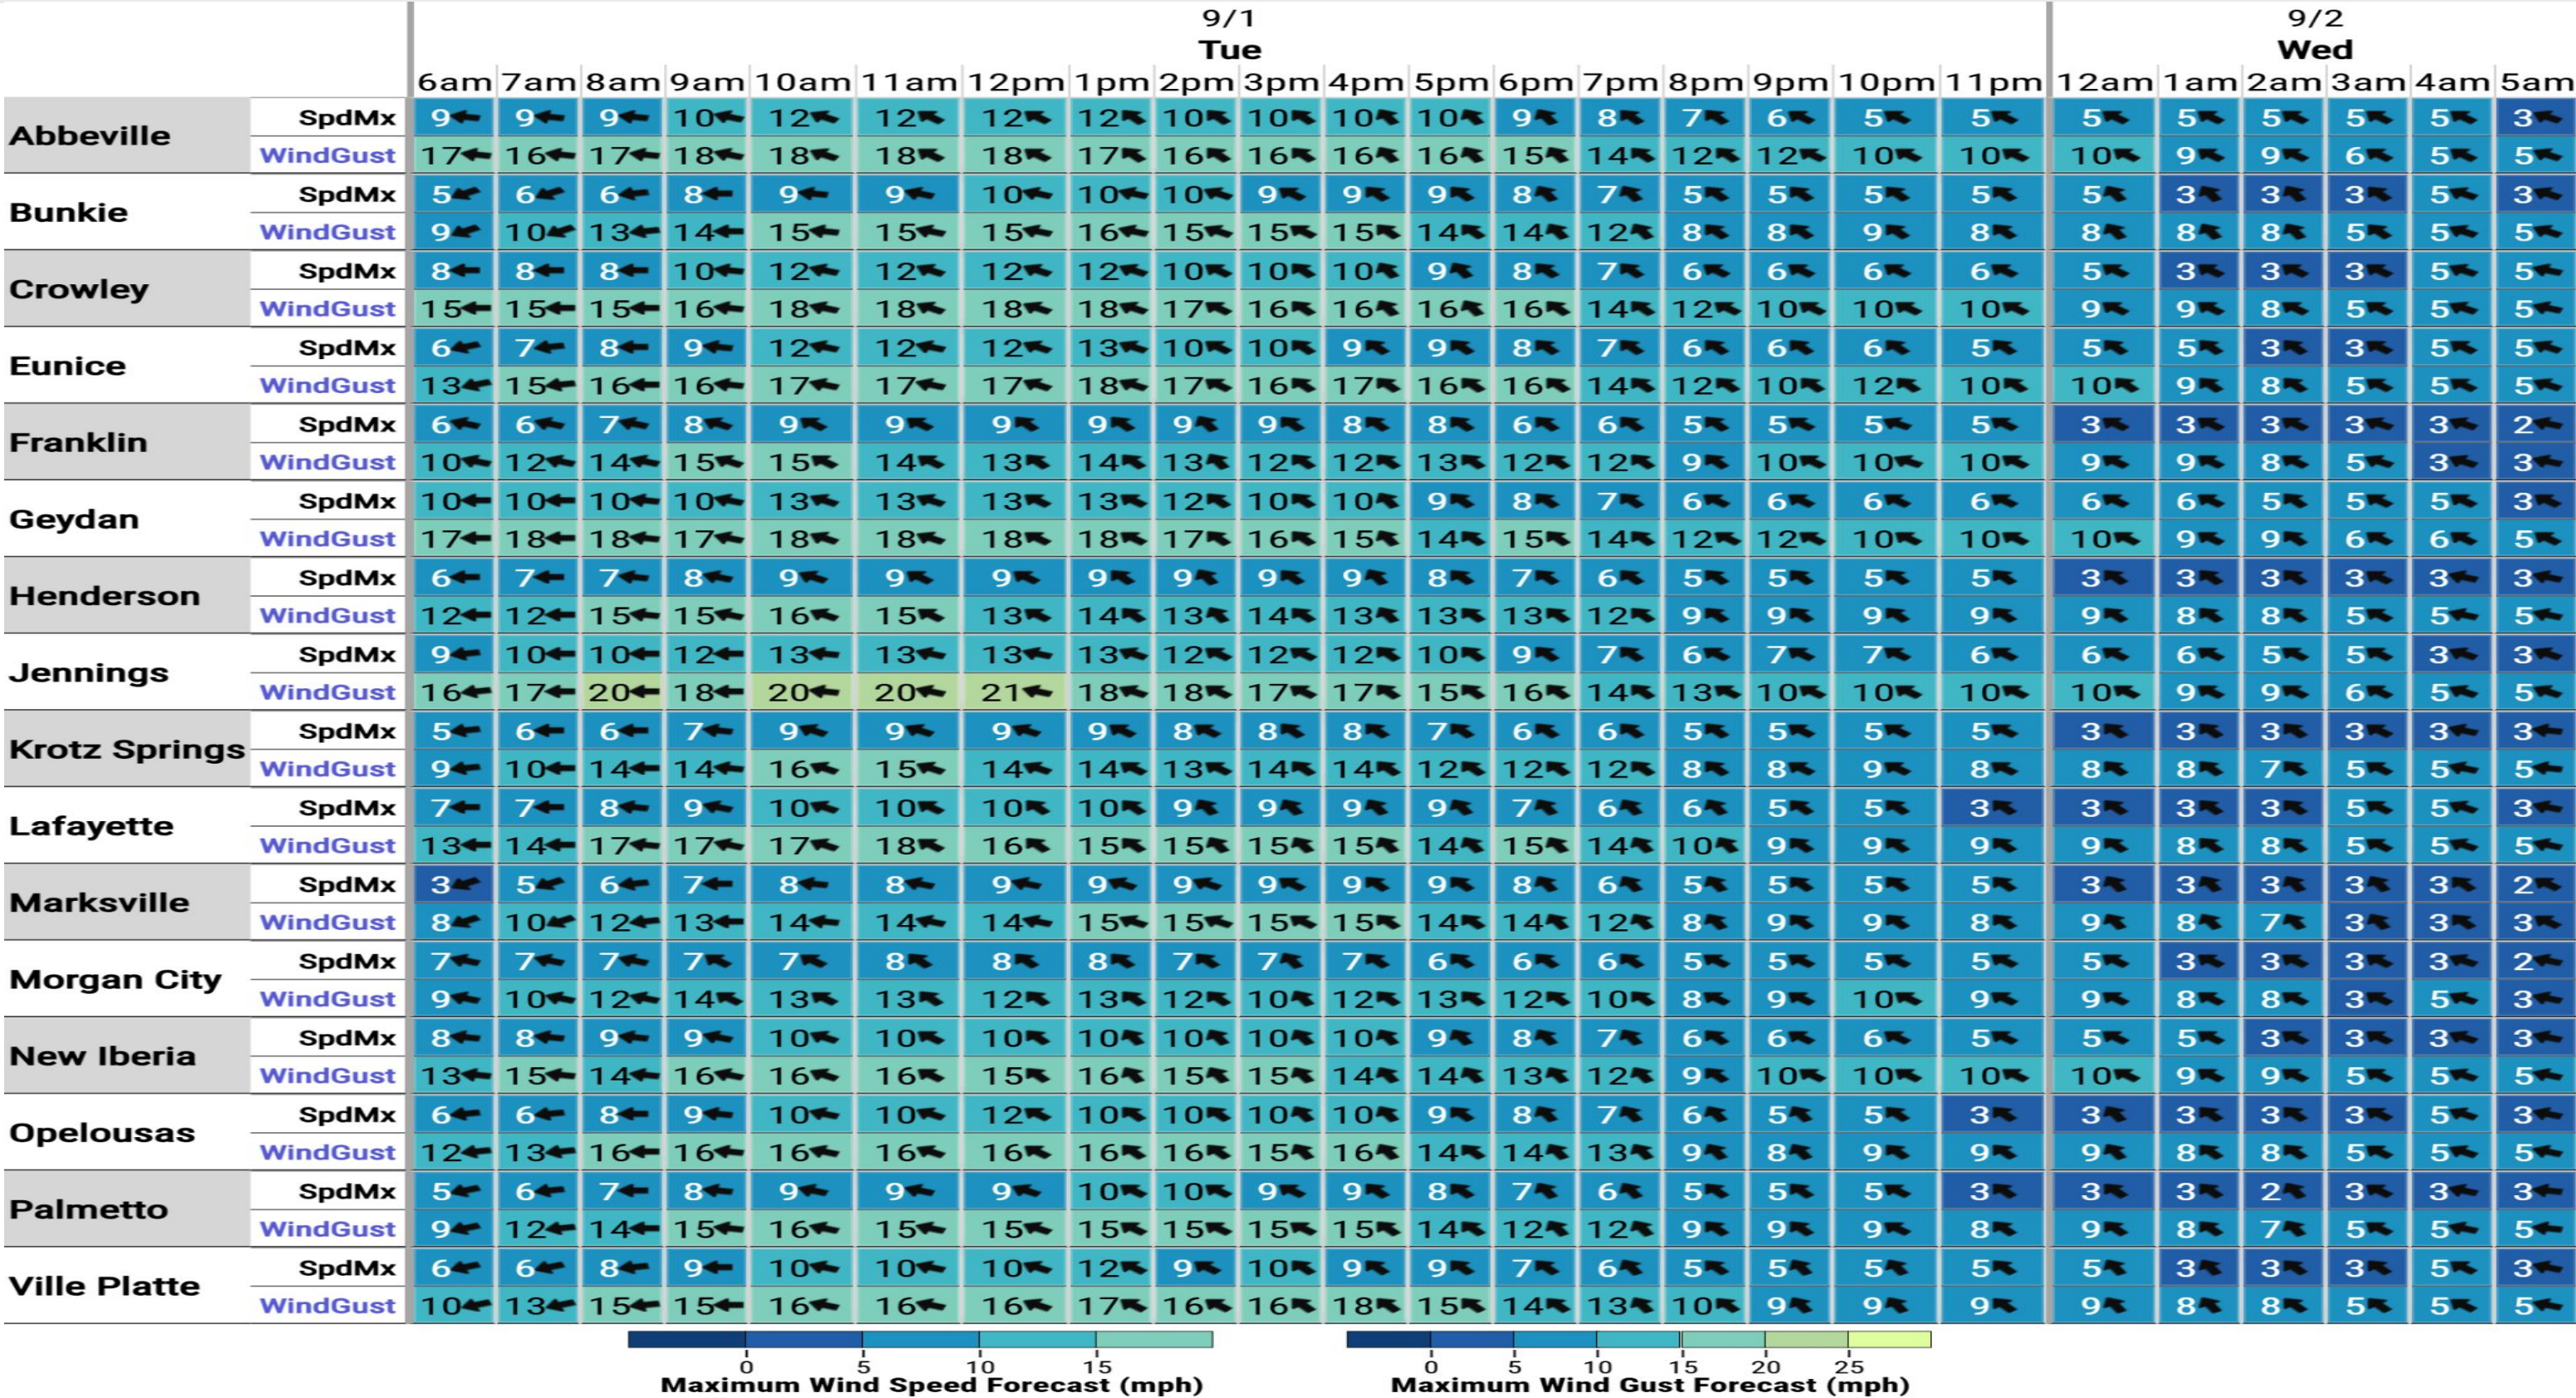

September 1, 2026
10:10 AM

Winds: Louisiana Southeast of HWY 165

September 1, 2026
10:10 AM

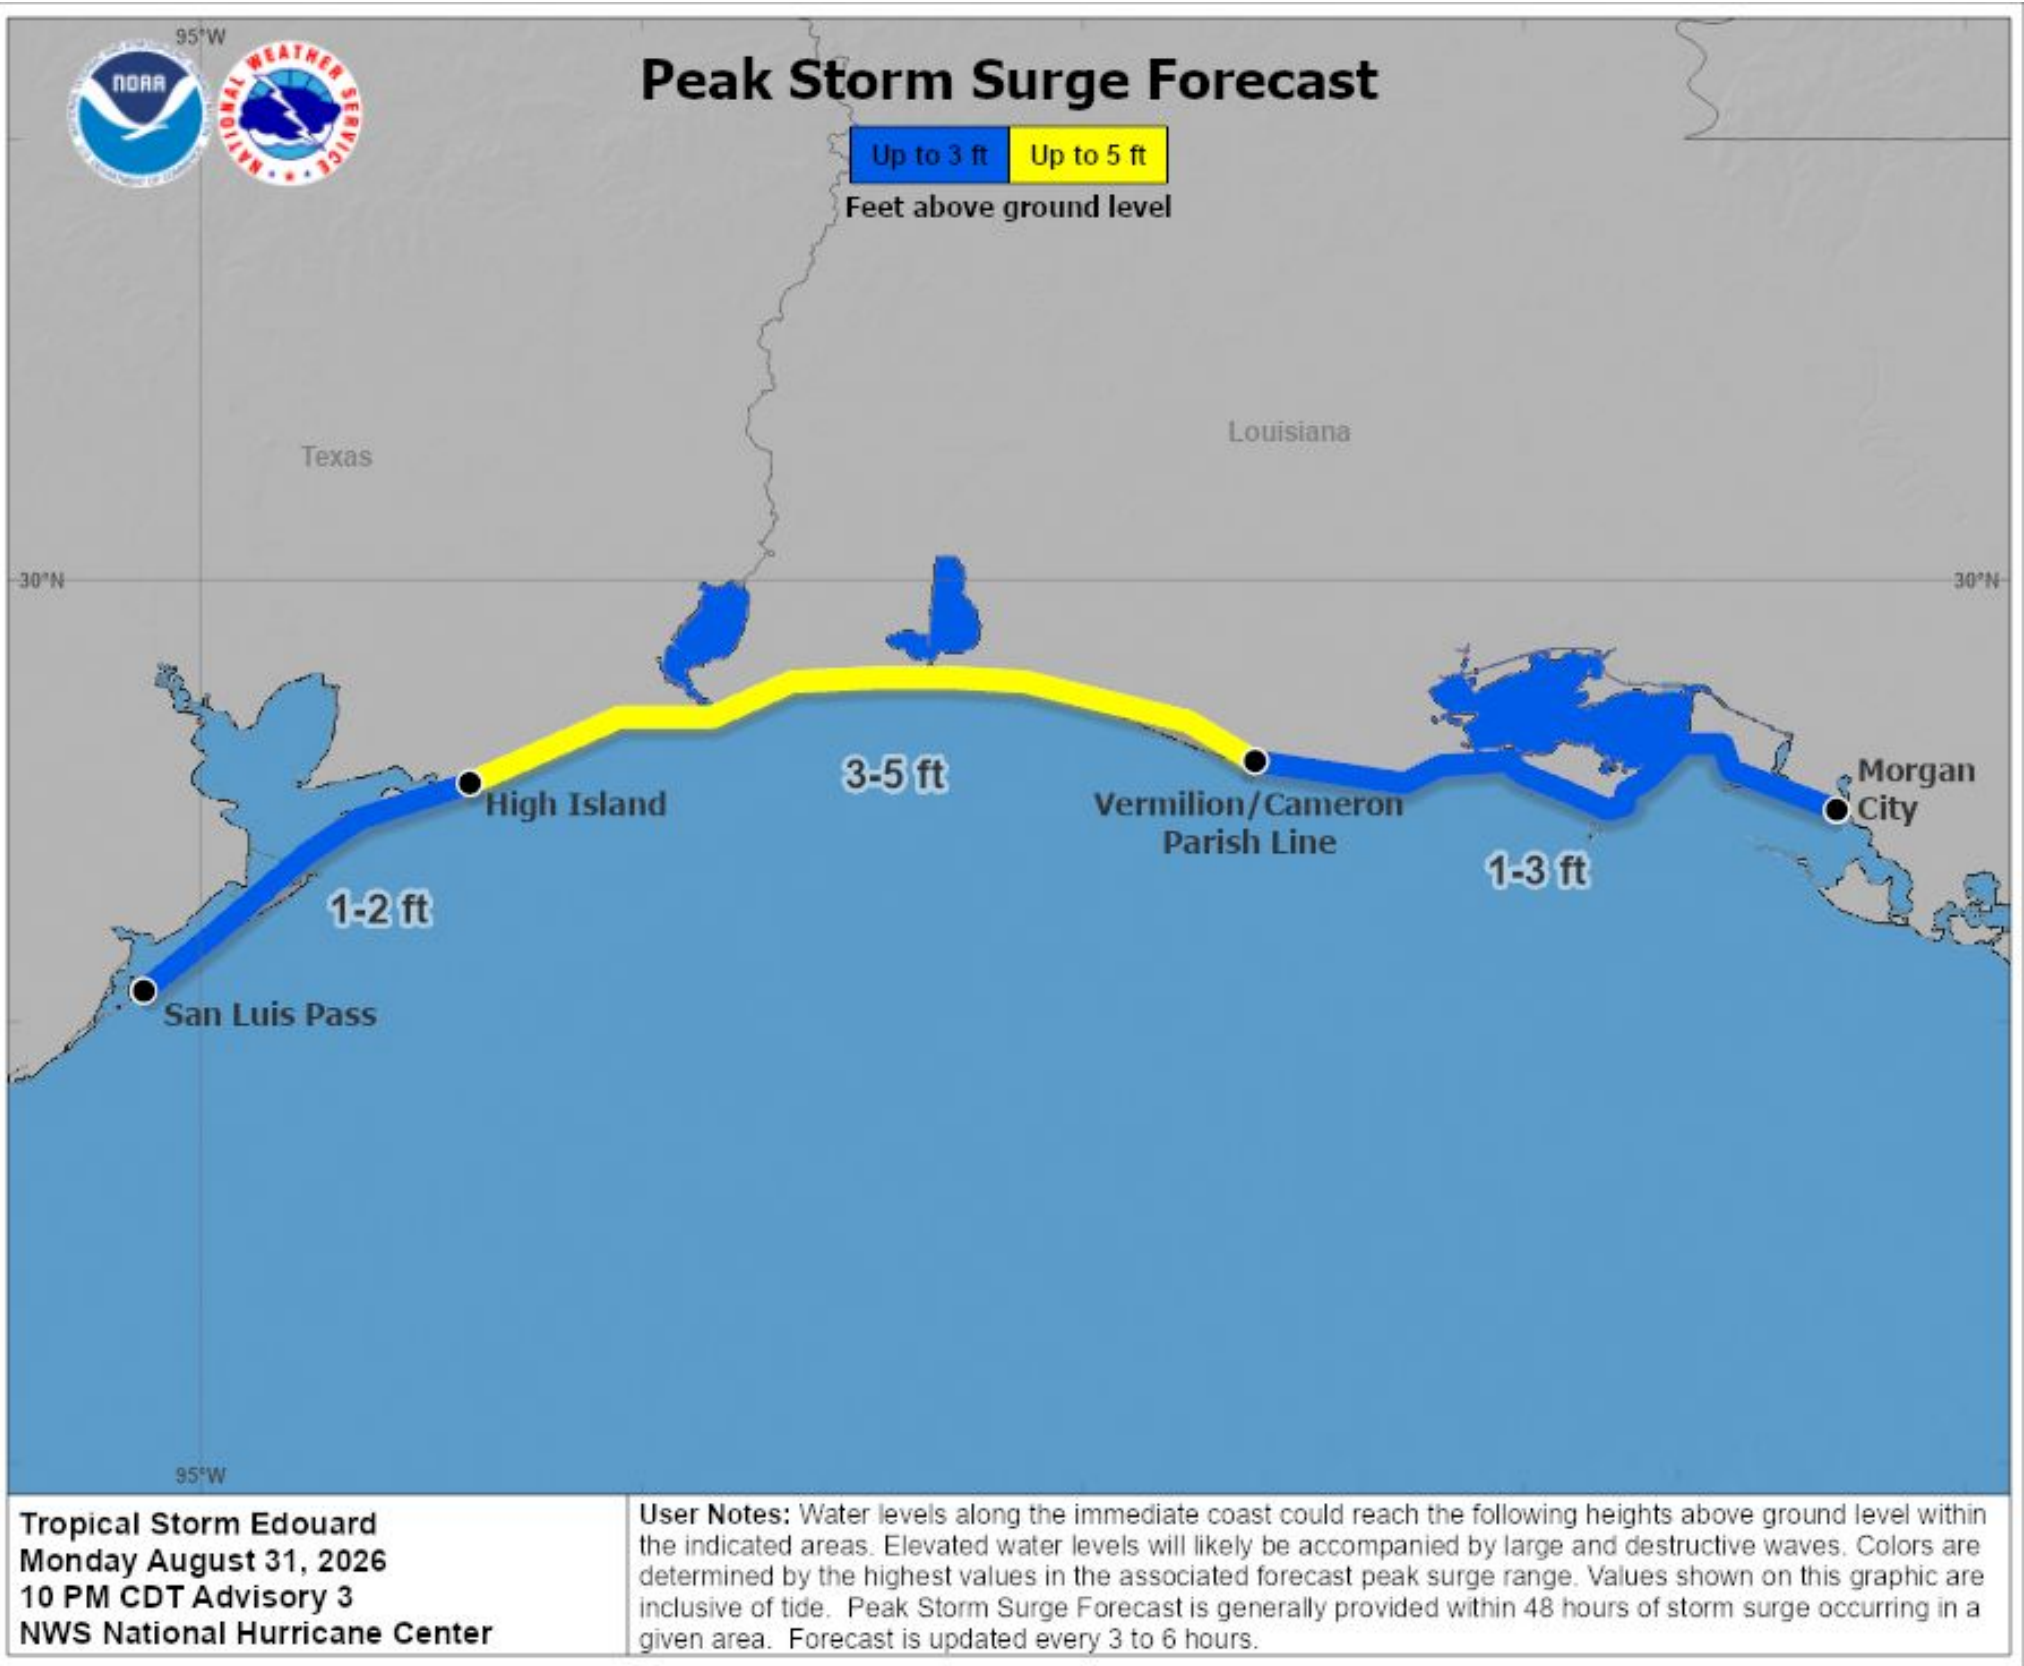

Peak Storm Surge

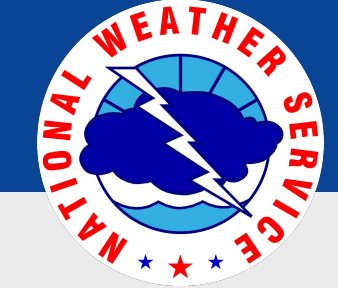

September 1, 2026
10:10 AM

Tropical Storm Edouard

- Current peak surge values are expected to be 3 - 5 feet along the coastline of southeast Texas and southwest Louisiana between High Island and the Vermillion/Cameron line.
- East of the Vermillion/Cameron line, surge values are expected to be around 1-3 feet

Wind Threat / Potential Impact

September 1, 2026
10:10 AM

Tropical Storm Edouard

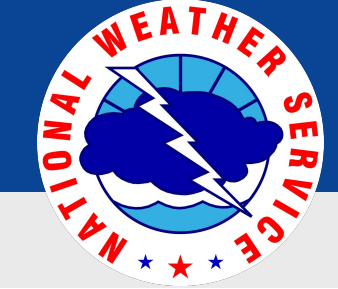

Isolated power outages are possible in the areas outlined in yellow.

National Oceanic and
Atmospheric Administration
U.S. Department of Commerce

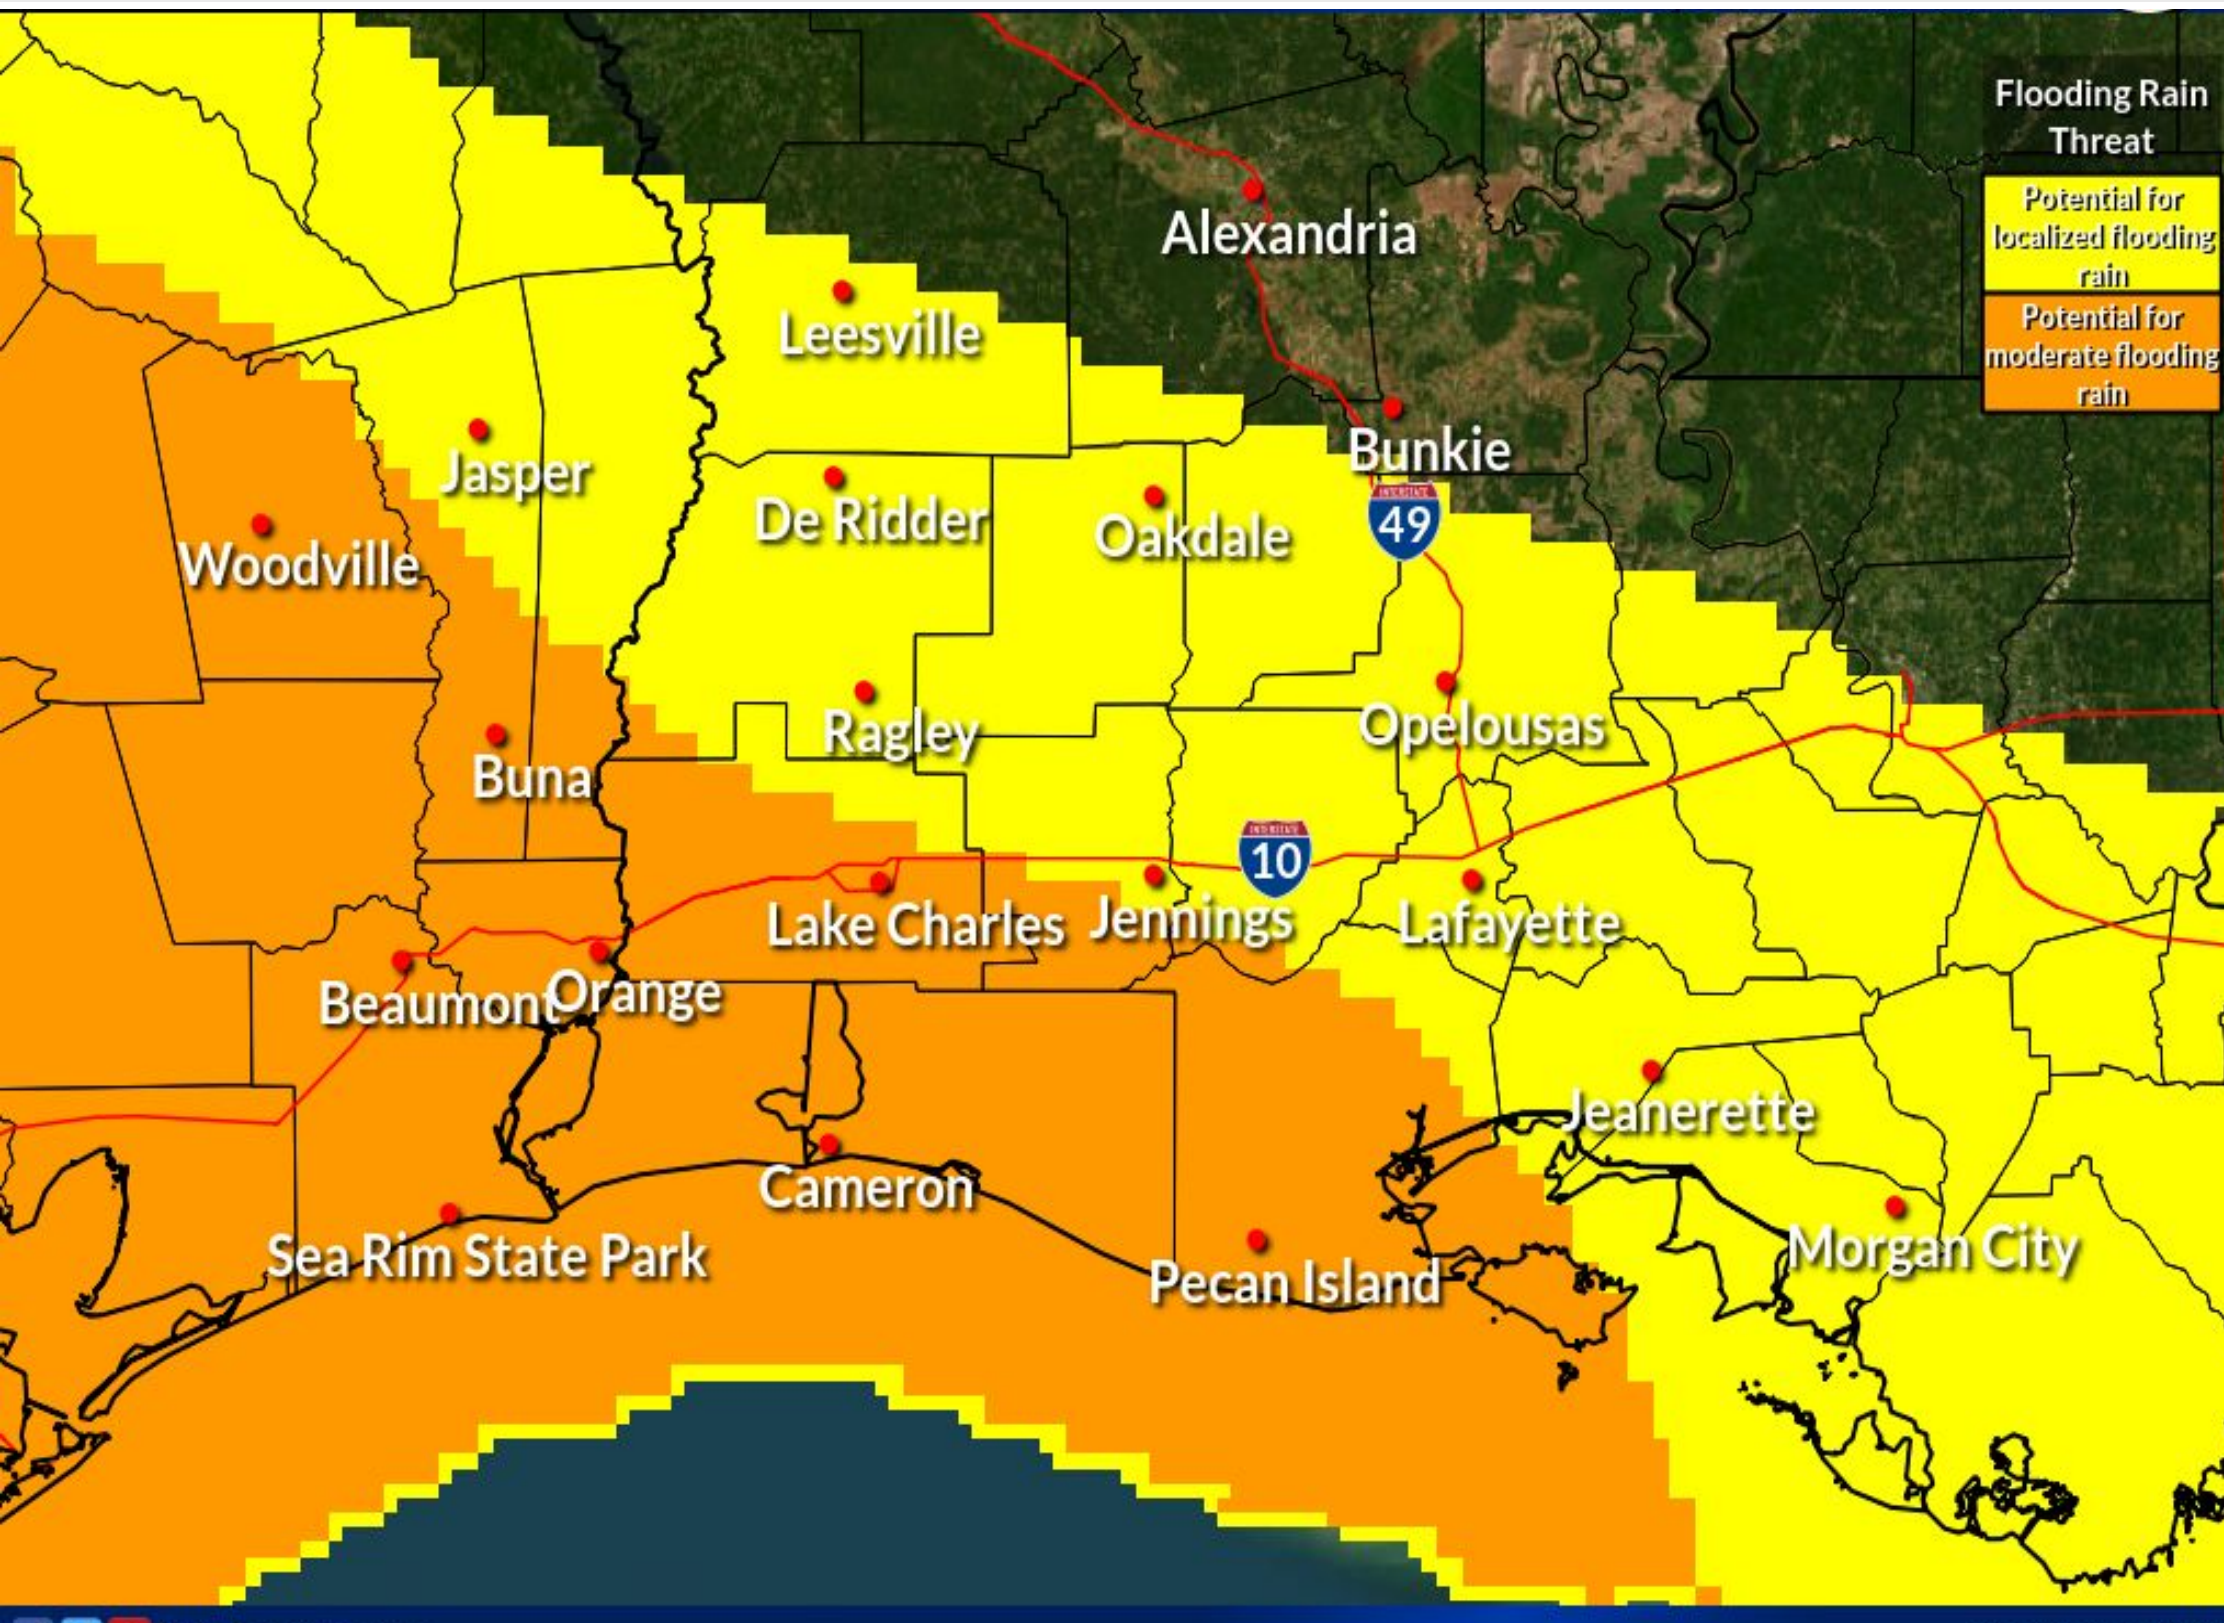

National Weather Service
Lake Charles, LA

Inland Flooding Impacts

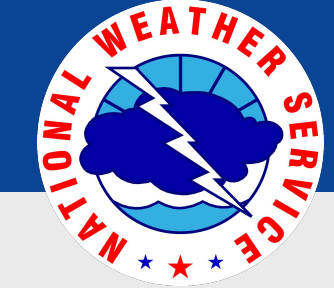

September 1, 2026
10:10 AM

Tropical Storm Edouard

- There is potential for moderate flooding rain impacts across a large part of SE TX as well as SW LA.
- There is potential for localized flooding rain impacts across interior SE TX, parts of CENLA, and Acadiana.

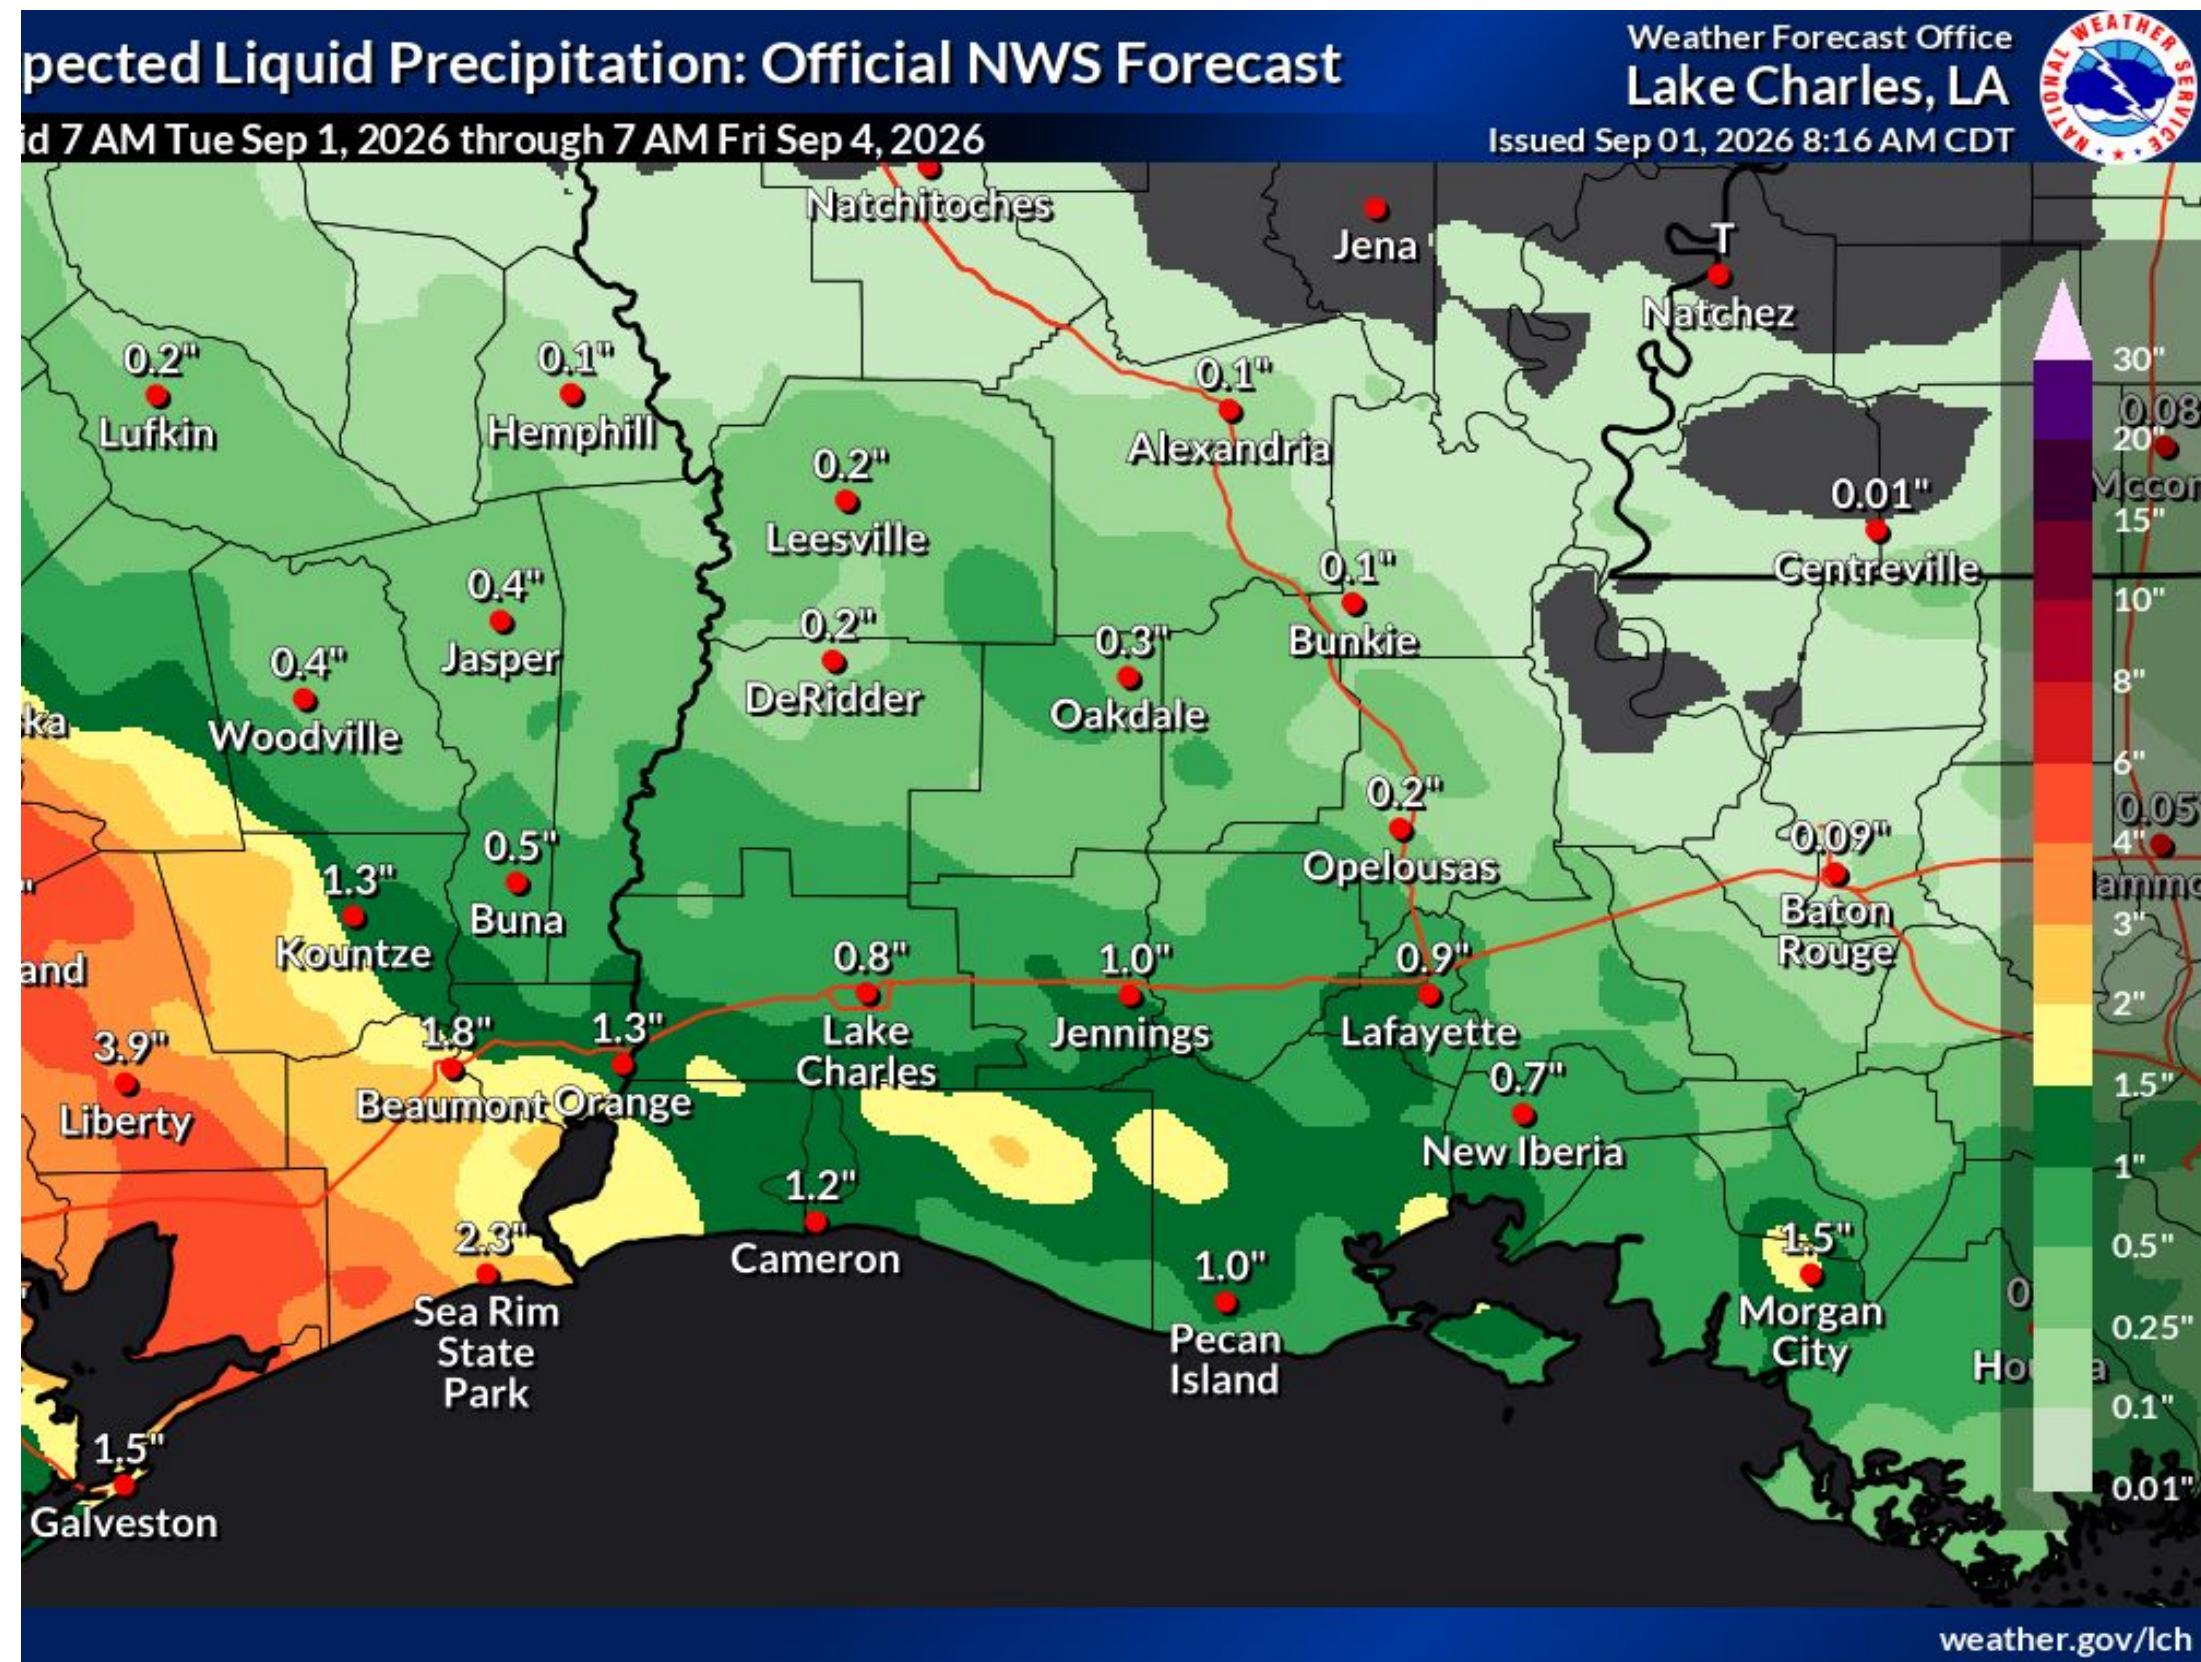

Expected Storm Total Rainfall

September 1, 2026
10:10 AM

Tropical Storm Edouard

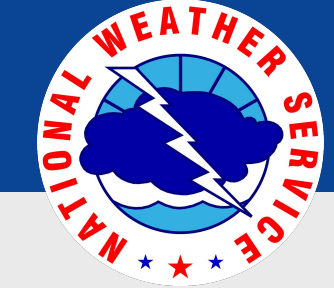

Rainfall amounts of one half to 4 inches with isolated higher amounts are expected.

National Oceanic and
Atmospheric Administration
U.S. Department of Commerce

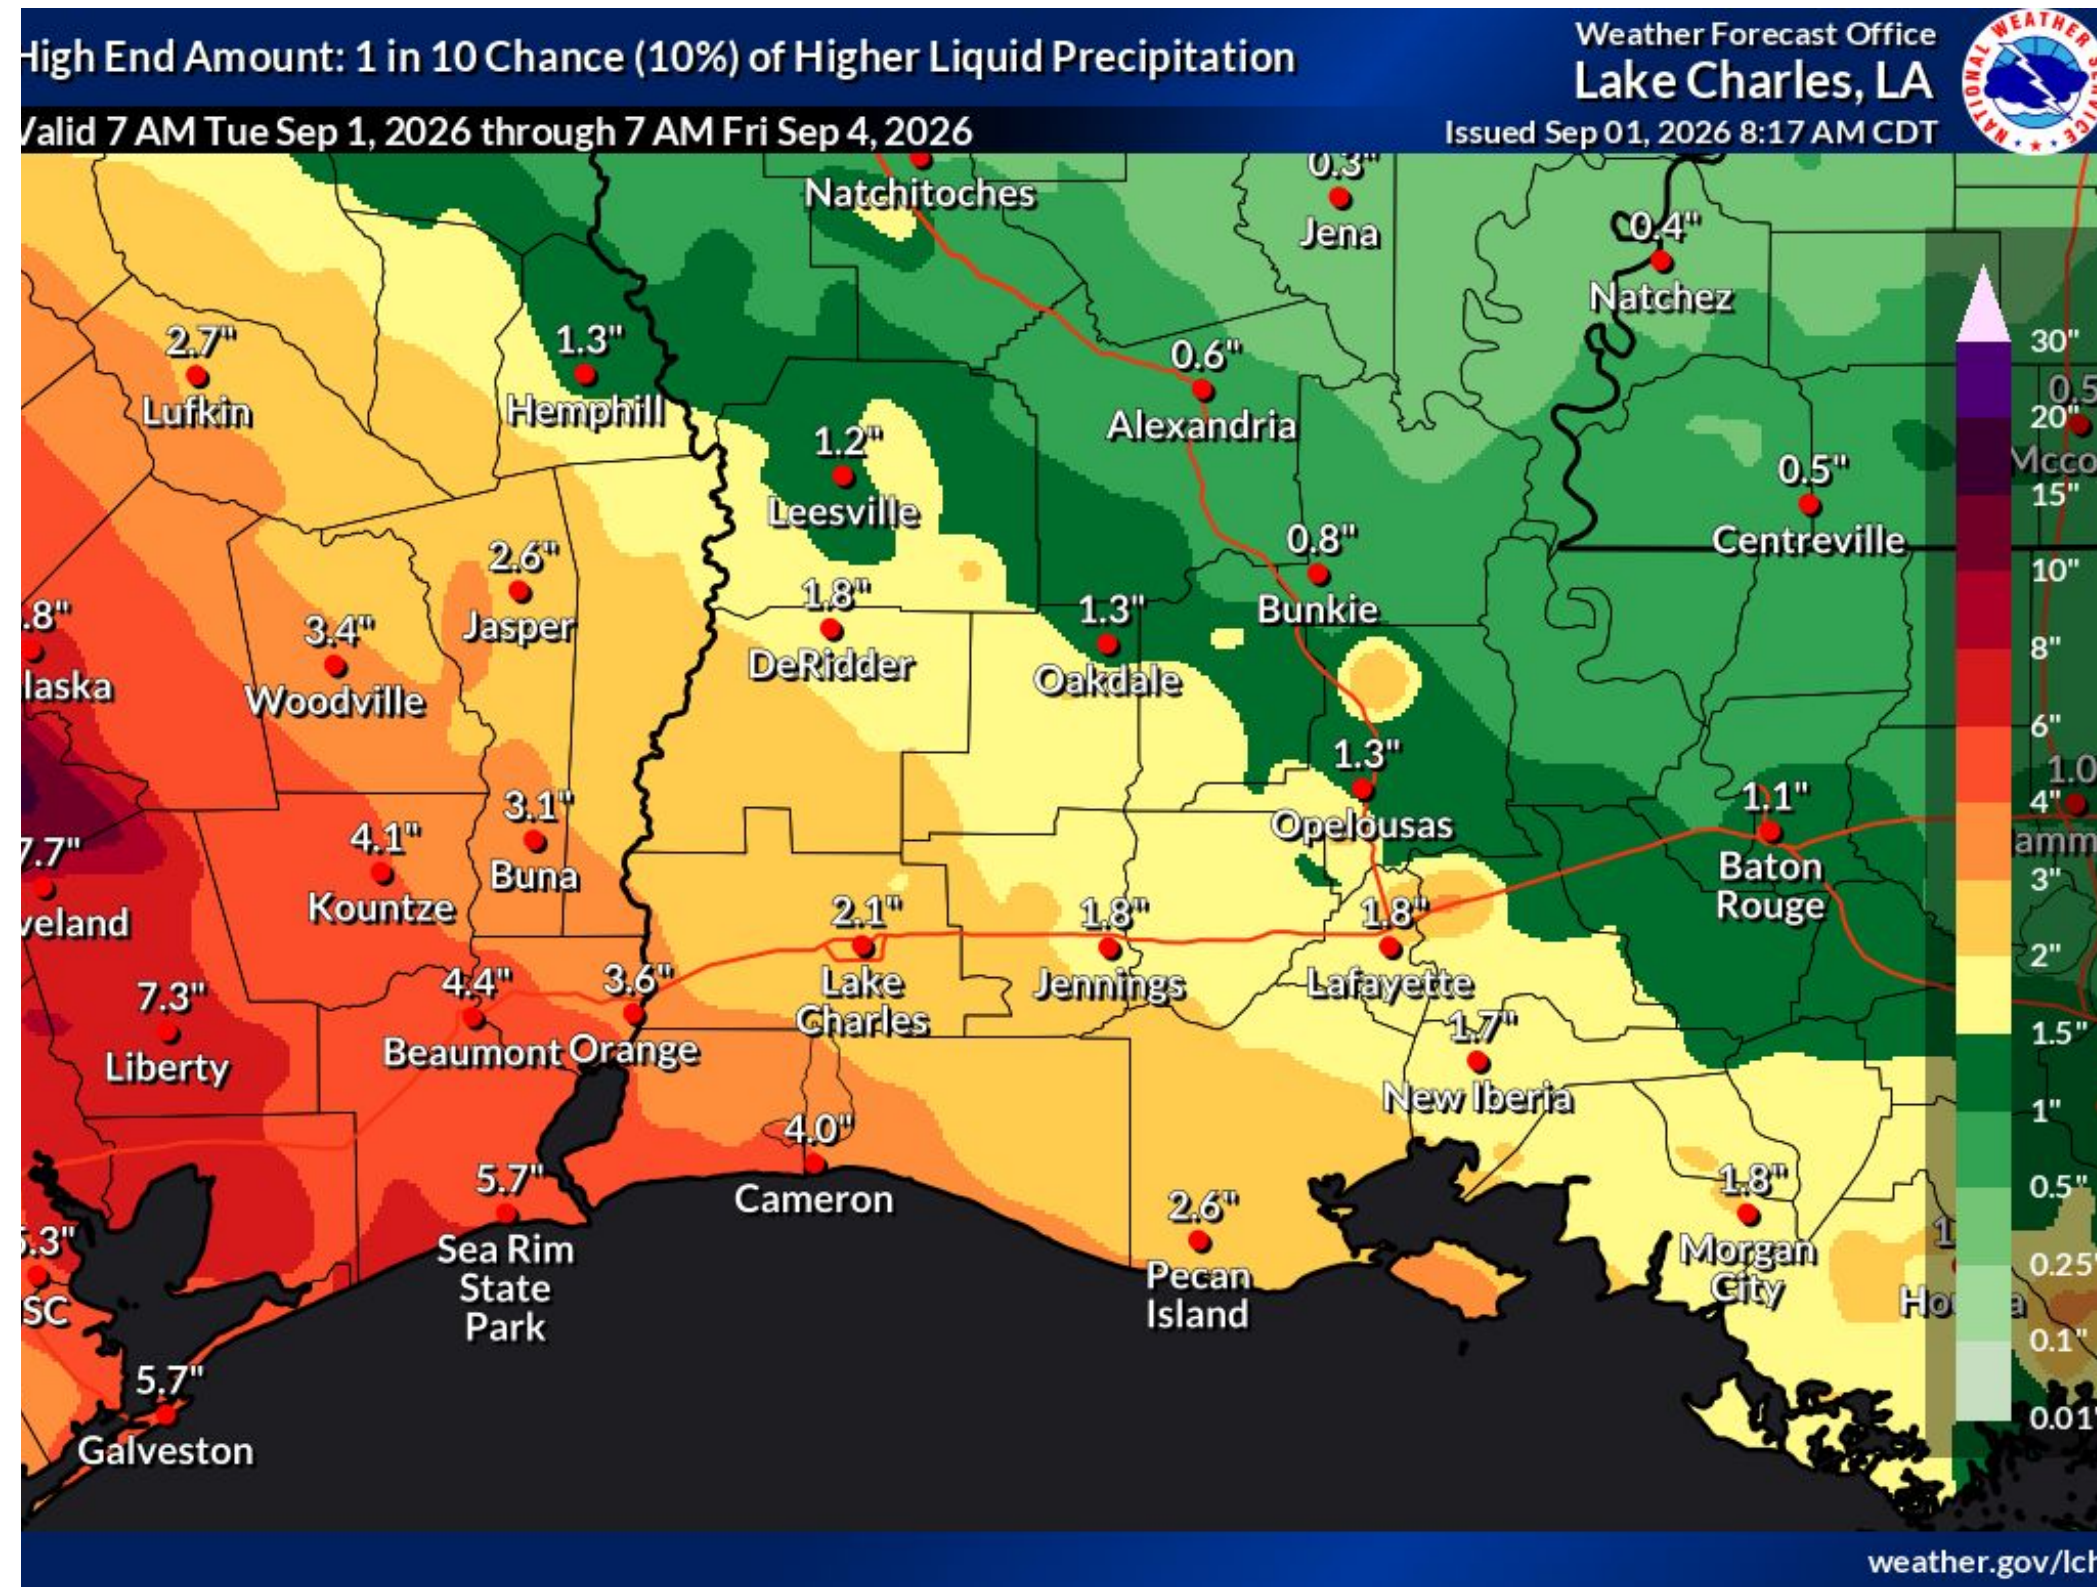

National Weather Service
Lake Charles, LA

Reasonable Worst Case Storm Total Rainfall

September 1, 2026
10:10 AM

Tropical Storm Edouard

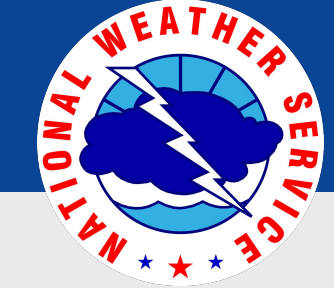

Reasonable worst case rainfall amounts of 2 to 8 inches with mainly across southeast Texas.

These values have a 1 in 10 chance of occurring.

National Oceanic and
Atmospheric Administration
U.S. Department of Commerce

National Weather Service
Lake Charles, LA

Potential Tornado Impacts

September 1, 2026
10:10 AM

Tropical Storm Edouard

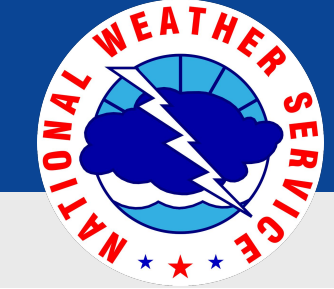

- Main threat of tornadoes would be from late morning to this evening.
